INTRODUCTION TO *RELEASE 100 NOTES*

This edition of *Release 100 Notes* describes the Release 100 ForceWare Graphics Drivers and provides information applicable to all NVIDIA drivers. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

Structure of the Document

This document is organized in the following sections:

- “[Release 100 Driver Changes](#)” on page 3 gives a summary of changes, and fixed and open issues in this version.
- “[The Release 100 Driver](#)” on page 19 describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.
- “[Mode Support for Windows](#)” on page 25 lists the default resolutions supported by the driver.

Changes in this Edition

This edition of the *Release 100 Notes* for Windows Vista includes information about NVIDIA ForceWare graphics driver version 100.64, and lists changes made to the driver since version 97.46. These changes are discussed beginning with the chapter “[Release 100 Driver Changes](#)” on page 3.

CHAPTER

2

RELEASE 100 DRIVER CHANGES

This chapter describes open issues for version 100.64, and resolved issues and driver enhancements for versions of the Release 100 driver up to version 100.64. The chapter contains these sections:

- “Version 100.64 Highlights” on page 4
- “Changes in Version 100.64” on page 7
- “Changes in Version 100.59” on page 8
- “Changes in Version 100.54” on page 10
- “Changes in Version 100.53” on page 11
- “Open Issues in Version 100.64” on page 13
- “Not NVIDIA Issues” on page 15
- “Known Product Limitations” on page 17

Version 100.64 Highlights

This section provides highlights of version 100.64 of the NVIDIA Release 100 Driver for Windows Vista.

What's New in Version 100.64

Resolved Issues

See [“Changes in Version 100.64” on page 7](#) for a list of resolved issues.

Limitations in This Release

The following are features that are not currently supported or have limited support in this driver release:

- **Refresh Rate Precision**

The current driver programs the hardware timing for a 59.94 Hz refresh rate to be the same as the timing used for a 60 Hz refresh rate.

- **Pan & Scan**

This driver does not support the Pan & Scan feature. (Pan & Scan is the process of panning across the desktop in order to display a desktop on a monitor with lower resolution).

- **Full-featured HDMI Support**

The following are known problems that will be fixed in a future driver version:

- There are some known image quality issues.
- Noise and pixel corruption occur under Clone or Dualview modes.
- Only stereo audio is supported; 5.1 surround is not supported.

- **INF Support for Restricted Timings**

This driver version does not support the use of Restricted Timing settings (R&T strings) in the INF to control mode validation and/or mode setting for custom mode/adaptor/monitor combinations. This capability is planned for a later driver release.

- **Overscan/Underscan Support**

The ability to display the entire desktop on a TV is not supported—the desktop will be masked instead.

- **Advanced Timings, Custom Resolutions**

This driver does not support adding arbitrary resolutions and timings.

- **Mode Filtering for Custom Policies**

This driver does not support defining advanced timings and resolution settings.

- **SDI**

This driver does not support the Serial Display Interface (a standard for driving high color depth displays).

- **Genlock/Frame Lock**

This driver does not support the ability to synchronize multiple display outputs with an external signal.

- **NVIDIA TurboCache**

The driver is capping Shared System Memory at 255 MB on systems with 1 GB of system memory, and at 271 MB on systems with 2 GB or more of system memory. An upcoming driver will increase this amount of memory.

Optimum performance will not be achieved with low frame buffer TurboCache graphics cards.

- **NVIDIA nView Desktop Manager** - Not yet available

Features Not Yet Available in the NVIDIA Control Panel

Support for the following control panel features is under development and not yet available under Windows Vista:

- **Display Category**
 - Run display optimization wizard
 - Move CRT screen position
 - Manage custom timings
 - Run multiple display wizard
 - Change flat panel scaling
- **Video & Television Category**
 - Adjust video color settings
 - Run television setup wizard
 - Adjust television color settings
 - Adjust screen size and position

- **Workstation Category**

The Workstation category page is not available with this driver version.

Changes in Version 100.64

The following sections list the changes made and issues resolved since driver version 100.59.

- “Fixed Issues–Windows Vista 32-bit” on page 7
- “Fixed Issues–Windows Vista 64-bit” on page 7

The NVIDIA bug number and driver module are provided for reference.

Fixed Issues–Windows Vista 32-bit

- NVIDIA Control panel “Change Flat Panel Scaling” page does not work correctly.
- GeForce 8800 GTS: Quake4–performance drops and the game occasionally crashes when symmetric multiprocessing (SMP) is enabled.
- GeForce 8800 GTX, GeForce 7900: Dark Age of Camelot and Command and Conquer: Zero Hour–shadows are green.
- GeForce 7800 GTX, GeForce 8 Series: When playing the game Prey at 1900x1200 with 4x antialiasing enabled, performance drops after saving the game.
- GeForce 7300 GT, GeForce 7600GS: Screen flicker occurs when clicking “Change Flat panel scaling” in the NVIDIA Control Panel.

Fixed Issues–Windows Vista 64-bit

- GeForce 8800 GTS: Quake4–performance drops and the game occasionally crashes when symmetric multiprocessing (SMP) is enabled.

Changes in Version 100.59

The following sections list the changes made and issues resolved since driver version 100.54.

- “New Features” on page 8
- “Fixed Issues–Windows Vista 32-bit” on page 9
- “Fixed Issues–Windows Vista 64-bit” on page 9

The NVIDIA bug number and driver module are provided for reference.

New Features

3D Feature Support

This driver supports the following 3D features:

Single GPU

- DirectX 9 support for GeForce 6/7/8 series GPUs
- DirectX 10 support for GeForce 8800 GPUs
- OpenGL support for GeForce 6/7/8 series GPUs

NVIDIA SLI™ Technology

- DirectX 9 support for GeForce 8800 GPUs only
- OpenGL support for GeForce 8800 GPUs only

DirectX 9 and OpenGL NVIDIA SLI support for GeForce 6 and 7 series GPUs, and DirectX 10 NVIDIA SLI support for GeForce 8800 GPUs will be available in a future driver.

NVIDIA SLI™ Technology

On SLI-ready systems, the NVIDIA Control Panel now includes SLI controls in the 3D Settings Category task page.

This driver has limited support for NVIDIA SLI™ technology on top DirectX 9.0 and OpenGL applications for GeForce 8800 GPUs only. NVIDIA will continue to provide driver updates for NVIDIA SLI on an ongoing basis to add new product support.

Fixed Issues—Windows Vista 32-bit

- Rotation position is not preserved across changes in multi-display modes.
- When viewed over component-out, the Media Center interface in full-screen mode flashes when the mouse cursor is moved across the screen.
- On some systems, the NVIDIA Control Panel cannot be launched.
- Doom 3 hangs when set to Ultra High and 16x AA.
- GeForce 8 Series, GeForce 7 Series: The Restore Defaults function does not work on the “Video & Television->Adjust Video Color Settings” page.
- GeForce 8800 GTS: The display goes blank when launching an MPEG file or DVD after resuming from Sleep mode.
- GeForce 8800 GTX: The display goes blank when connecting an HDTV to the component-out connection.
- GeForce 6800 GT/Ultra: There is flickering at the bottom of the video when playing MPEG2 HD files.
- GeForce 8800 GTX: Dual-link mode high resolutions are not available on the 30” Apple display.

Fixed Issues—Windows Vista 64-bit

- GeForce 8800 GTX: Dual-link mode high resolutions are not available on the 30” Apple display.
- GeForce 8800 GTS: The display goes blank when launching an MPEG file or DVD after resuming from Sleep mode.
- GeForce 8800 GTX: Corruption and stair-case effect results while playing a video in full-screen mode.
- GeForce 6800 GT/Ultra: There is flickering at the bottom of the video when playing MPEG2 HD files.

Changes in Version 100.54

The following sections list the changes made and issues resolved since driver version 100.53.

- “Fixed Issues–Windows Vista 32-bit” on page 10

The NVIDIA bug number and driver module are provided for reference.

Fixed Issues–Windows Vista 32-bit

- GeForce 8800 GTX: The system reboots intermittently when resuming from sleep modes.

Changes in Version 100.53

The following sections list the changes made and issues resolved since driver version 97.46.

- [“New Features” on page 11](#)
- [“Fixed Issues–Windows Vista 32-bit” on page 12](#)
- [“Fixed Issues–Windows Vista 64-bit” on page 12](#)

The NVIDIA bug number and driver module are provided for reference.

New Features

- **Display Rotation**

The NVIDIA Control Panel now includes display rotation controls in the Display Category task page.

- **Change Resolution**

The NVIDIA Control Panel now includes resolution controls in the Display Category task page.

- **Desktop Color Settings Adjustment**

The NVIDIA Control Panel now includes desktop color settings adjustment controls in the Display Category task page.

- **DirectX Antialiasing**

The NVIDIA Control Panel now offers full antialiasing support for DirectX applications.

Fixed Issues—Windows Vista 32-bit

- 1360x768 resolution is selectable in the OS slider even on DVI panels with a maximum resolution of 1280x1024.
- GeForce 7300GT: The NVIDIA Control Panel cannot set 480p or 575p modes, only 480i or 575i.
- The screen turns blank after enabling rotation in Dualview mode.
- The NVIDIA Control Panel antialiasing does not work.
- GeForce 6100/6150: Digital Dualview display is blank upon resume from system standby.

Fixed Issues—Windows Vista 64-bit

- The screen turns blank after enabling rotation in Dualview mode.

Open Issues in Version 100.64

As with every released driver, version 100.64 of the Release 100 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others may have workaround solutions.

Windows Vista 32-bit Issues

- SLI Mode: When disabling SLI mode from the NVIDIA Control Panel, no dialog box appears to prompt the user to reboot the system. *A reboot is required to properly disable SLI mode in the driver.*
- NVIDIA Control Panel antialiasing does not work with games that use *high dynamic range* (HDR) rendering, such as Oblivion and Rainbow Six Vegas.
- NVIDIA Control Panel: Application profiles do not work properly on systems with multiple user accounts
- NVIDIA Control Panel Desktop Color Settings are not saved after rebooting the system.
- NVIDIA Cascades demo has some sparkle artifacts.
- GeForce 8800 GTX/GTS: Display does not resume from S3 or S4 suspend mode.
- GeForce 8800 GTX/GTS: HDTV output is black and white.
- GeForce 8800 GTX: S-Video/Composite/Component settings are not saved after closing and then re-opening the NVIDIA Control Panel.
- GeForce 8800 GTX, GeForce 7900 GTX: Company of Heroes crashes when trying to load the Cherbourg level.
- GeForce 8800 GTX: Changing resolutions within the game Prey results in ghosting.
- GeForce 7 Series: Serious Sam II shows flash of corruptions when the character moves.
- GeForce 7 Series: With TMM enabled, the driver does not detect a hot-plugged VGA (dongle) or DVI connection.
- GeForce 7800 GTX: Civilization 4 does not initialize after enabling antialiasing in the NVIDIA Control Panel.
- GeForce 7300: Black & White 2 shows flashing corruption.

Windows Vista 64-bit Issues

- NVIDIA Control Panel Desktop Color Settings are not saved after rebooting the system.
- GeForce 8800 GTX/GTS: HDTV output is black and white.
- GeForce 8800 GTX: S-Video/Composite/Component settings are not saved after closing and then re-opening the NVIDIA Control Panel.
- GeForce 7 Series: With TMM enabled, the driver does not detect a hot-plugged VGA (dongle) or DVI connection.
- GeForce 7800 GTX: 30" Apple Cinema does not sync when connected to the top TMDS.

Not NVIDIA Issues

This section lists issues that are not due to the NVIDIA driver as well as features that are not meant to be supported by the NVIDIA driver for Windows Vista.

Unsupported Features

The following are features and functionality that were available in driver releases supporting Windows XP, but are not available in driver releases for Windows Vista:

- **High resolution scaling desktop (HRSD)**
- **MultiView Display Mode** (for NVIDIA Quadro NVS graphics cards)
- **NVKeystone**
- **Unified back buffer (UBB) controls**
- **Video Overlays**

This is an operating system limitation. Vista window manager features will provide new ways of accomplishing overlays, but will require application porting.
- **Overclocking**

GPU overclocking is no longer supported in the default GPU driver control panel. This feature will be available in a separate downloadable utility.
- **GPU Temperature Monitoring**

Temperature monitoring is no longer supported in the default GPU driver control panel. This feature will be available in a separate downloadable utility.
- **AGP Settings Adjustment**
- **Full-screen Video Mirror**
- **Video Zoom**
- **nView Span Modes**
- **Edge Blending**
- **Display/Connection Wizard** (such as was provided with Windows Media Center Edition)
- **DVD/MPEG Extensions** (such as was provided with Windows Media Center Edition)
- **Audio Extensions** (such as was provided with Windows Media Center Edition)
- **Windowed quad-buffered stereo**

This is an operating system limitation.

OpenGL Application Issues

The following are known compatibility issues for OpenGL applications developed under Windows XP:

- Mixed GDI and OpenGL rendering does not work.

A number of applications use GDI to render UI components and object highlighting. This is not supported in the Windows Vista driver model.

NVIDIA recommends converting GDI rendering to OpenGL.

The following are some applications that are known to have this issue:

- Maya 7.01
- OneSpace Designer Modeling
- Applications, Tools, and Benchmarks not Supported Under Windows Vista
 - GLperf
 - 3ds max 8 (later releases may be supported)
 - CATIA V5R15 (V5R16 is supported)
 - PTC's CDRS 2001
- Front buffered rendering may be slow, especially when DWM is enabled.

Flushing the rendering queue while rendering to the front buffer may cause the window manager to recomposite. Applications should therefore minimize the frequency with which they flush the rendering queue.

Video Performance

- Be sure to use the latest Windows Vista build to take advantage of NVIDIA's improved video playback performance.
- The default video decoders in Windows Vista do not yet take advantage of hardware acceleration.

Application Issues

- Call of Duty 2—Only solid colors render during gameplay when 4xAA is enabled.

The application is not applying antialiasing properly.

Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

- “[Driver Reports 256 MB Memory on NVIDIA Quadro FX 330 Cards](#)” on page 17
- “[Gigabyte GA-6BX Motherboard](#)” on page 17

Driver Reports 256 MB Memory on NVIDIA Quadro FX 330 Cards

- **Problem**

When a 64 MB NVIDIA Quadro FX 330 card is installed, the driver reports that the card needs 256 MB, causing 256 MB of address space to be consumed.

- **Explanation**

This is not a bug but a product limitation.

The NVIDIA Quadro FX 330 GPU has some limitations that prevent the card from addressing less than 256 MB of system memory.

Gigabyte GA-6BX Motherboard

This motherboard uses a Linfinity regulator on the 3.3-V rail that is rated to only 5 A—less than the AGP specification, which requires 6 A. When diagnostics or applications are running, the temperature of the regulator rises, causing the voltage to the NVIDIA chip to drop as low as 2.2 V. Under these circumstances, the regulator cannot supply the current on the 3.3-V rail that the NVIDIA chip requires.

This problem does not occur when the graphics board has a switching regulator or when an external power supply is connected to the 3.3-V rail.

- “Driver Installation” on page 23
- “NVIDIA Driver History” on page 24

Hardware and Software Support

Supported Operating Systems

The Release 100 driver, version 100.64, has been tested with Microsoft Windows® Vista RTM OS builds version 6000 or higher, and supports both 32-bit and 64-bit versions of Windows Vista Editions:

- Windows Vista Home Basic
- Windows Vista Home Premium
- Windows Vista Business
- Windows Vista Enterprise Edition
- Windows Vista Ultimate

Driver Installation

Minimum Hard Disk Space

The hard disk space requirement is minimum 33 MB for English-only, and 56 MB for International.

Installation Instructions

- 1 Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.
 - 2 Click the driver download link.
 - 3 The license agreement dialog box appears.
 - 4 Click **Accept** if you accept the terms of the agreement, then either open the file or save the file to your PC and open it later.
 - 5 Extract the zip files to a temporary folder on your PC.
 - 6 Open the NVIDIA driver installation .EXE file to launch the NVIDIA InstallShield Wizard.
 - 7 Follow the instructions in the NVIDIA InstallShield Wizard to complete the installation.
- Note:** After the driver installation, Windows may default to 16-bpp color and disable the Desktop Window Manager (DWM). To work around this issue, set the color to 32-bpp and then reboot the PC.

NVIDIA Driver History

Release 100 is the latest NVIDIA driver available. [Table 3.1](#) contains a summary of some previous driver releases and the versions associated with them. Some versions listed may not have been released outside of NVIDIA.

MODE SUPPORT FOR WINDOWS

This chapter details the Windows modes supported by the Release 100 driver for NVIDIA products. It contains these sections:

- “General Mode Support Information” on page 26
- “Default Modes Supported by GPU” on page 27
- “Modes Supported by DACs and TV Encoders” on page 33

General Mode Support Information

The NVIDIA graphics driver includes a standard list of display modes that are supported by default. These modes are listed in the section “[Default Modes Supported by GPU](#)” on page 27.

The actual modes available depend on the capabilities of the display. In addition, the NVIDIA graphics driver has a “dynamic EDID detection” capability and will make available *additional* modes that are listed in the display EDID, provided the graphics hardware can support it.

The NVIDIA graphics driver also supports the high resolutions available with the displays listed in [Table A.1](#) as well as the non-standard modes listed in [Table A.2](#).

Table A.1 Modes Supported for High Resolution Displays

Display	Maximum Resolution	Hardware Requirements
Apple 30" Cinema HD Display (Dual link DVI)	2560x1600 @ 60 Hz	<ul style="list-style-type: none"> All high-end NVIDIA Quadro FX graphic solutions. All GeForce 7 series GPUs GeForce 6800 Ultra 512 GeForce 6800 with 512 MB
Dell WFP 3007 (Dual Link DVI)	2560x1600 @ 60 Hz	<ul style="list-style-type: none"> All High-end NVIDIA Quadro FX graphic solutions. All GeForce 7 series GPUs GeForce 6800 Ultra 512 GeForce 6800 with 512 MB

Table A.2 Non-standard Modes Supported

Resolution
1680 x 1050
1366 x 768

Default Modes Supported by GPU

This section lists the modes that are included by default in the driver INF for the following product families:

- “GeForce 7 Series, GeForce 6 Series, and NVIDIA Quadro FX Family of High End GPUs” on page 28

Understanding the Mode Format

Figure A.1 gives an example of how to read the mode information presented in this section.

Resolution	Color Depth	Refresh Rates
-----	-----	-----

Example entry: 1024 x 768 32 60 70 72 75 85 100 120 140 144 150 170 200

Meaning:	Resolution:	1024 x 768
	Color depth:	32 bpp
	Refresh rates:	60 Hz, 70 Hz, 72 Hz, 75 Hz, 85 Hz, 100 Hz, 120 Hz, 140 Hz, 144 Hz, 150 Hz, 170 Hz, and 200 Hz

Figure A.1 Mode Format

Note:

- Horizontal spanning modes of 3840x1080 and above, and vertical spanning modes of 1920x2160 and above generally require at least 32 MB of video memory at 32 bpp.
- An “i” next to the refresh rate indicates an interlaced refresh rate.

GeForce 7 Series, GeForce 6 Series, and NVIDIA Quadro FX Family of High End GPUs

This sections lists the supported display resolutions, color depths, and refresh rates for the following products:

- NVIDIA GeForce 8800 GTX/ GTS

Modes Supported by DACs and TV Encoders

This section lists the supported modes and formats for the following:

- “External DAC Mode Support” on page 33
- “TV-Out Mode Support” on page 34

External DAC Mode Support

Fairchild FMS3815 Modes Supported

Table A.3 shows the refresh rates for various resolutions of the Fairchild FMS3815 external DAC, which is commonly used on GeForce2 MX and Quadro2 MXR boards to drive a secondary CRT.

Table A.3 External DAC Modes (Fairchild FMS3815)

Resolution	Supported Rates (Hz)
640x480	60, 70, 72, 75, 85, 100, 120, 140, 144, 150, 170
800x600	60, 70, 72, 75, 85, 100, 120, 140, 144, 150, 170
1024x768	60, 70, 72, 75, 85, 100, 120
1152x864	60, 70, 72, 75, 85
1280x720	60, 70, 72, 75, 85, 100
1280x960	60, 70, 72, 75
1280x1024	60, 70, 72, 75
1360x768	60, 70, 72, 75, 85
1600x900	60, 70
1600x1200	—

Analog Devices ADV-7123 Modes Supported

Table A.4 shows the refresh rates for various resolutions of the Analog Devices ADV-7123 external DAC, which is commonly used on the GeForce2 MX and the Quadro2 MXR boards to drive a secondary CRT.

Table A.4 External DAC Modes (Analog Devices ADV-7123)

Resolution	Supported Rates (Hz)
640x480	60, 70, 72, 75, 85, 100, 120, 140, 144, 150, 170
800x600	60, 70, 72, 75, 85, 100, 120, 140, 144, 150, 170
1024x768	60, 70, 72, 75, 85, 100, 120
1152x864	60, 70, 72, 75, 85, 100
1280x720	60, 70, 72, 75, 85, 100
1280x960	60, 70, 72, 75, 85, 90

Table A.4 External DAC Modes (Analog Devices ADV-7123) (continued)

Resolution	Supported Rates (Hz)
1280x1024	60, 70, 72, 75, 85
1360x768	60, 70, 72, 75, 85, 100

TV-Out Mode Support

Table A.5 and Table A.6 list the NTSC, PAL, and HDTV TV-Out modes supported by the NVIDIA driver.

Table A.5 Mode Support for S-Video and Composite Out

Resolution	Bit depth	Comments
320x200	8, 16, 32	DirectDraw mode; not selectable as a Windows desktop
320x240	8, 16, 32	DirectDraw mode; not selectable as a Windows desktop
640x400	8, 16, 32	DirectDraw mode; not selectable as a Windows desktop
640x480	8, 16, 32	
720x480	8, 16, 32	Overscans (for video)
720x576	8, 16, 32	Overscans (for video)
800x600	8, 16, 32	
1024x768	8, 16, 32	Conexant 25871 only

Table A.6 Mode Support for Component YPrPb Out and DVI Out

Resolution	Comments
480i (SDTV)	Supported on graphics boards with Conexant 875 or Philips 7108 TV encoders and compatible connectors, and compatible GeForce 6 Series and GeForce 7 Series GPUs.
480p (EDTV)	
720p (HDTV)	
1080i (HDTV)	
576i (PAL)	
576p (PAL)	

The driver supports manual overscan correction for component and DVI outputs. See the *ForceWare Graphics Driver User's Guide* for instructions on how to use the overscan correction features in the control panel.
