INTRODUCTION TO RELEASE NOTES

This edition of Release Notes describes the Release 185 Graphics Drivers for Microsoft® Windows® Vista. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

Structure of the Document

This document is organized in the following sections:

- “Release 185 Driver Changes” on page 3 gives a summary of changes, and fixed and open issues in this version.
- “The Release 185 Driver” on page 23 describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.
- “Mode Support for Windows” on page 27 lists the default resolutions supported by the driver.

Changes in this Edition

This edition of the Release Notes for Windows Vista includes information about NVIDIA graphics driver version 185.81, and lists changes made to the driver since version 182.50. These changes are discussed beginning with the chapter “Release 185 Driver Changes” on page 3.
Chapter 1: Release 185 Driver Issues

Changes in this Edition
This chapter describes open issues for version 185.81, and resolved issues and driver enhancements for versions of the Release 185 driver up to version 185.81. The chapter contains these sections:

- “Version 185.81 Highlights” on page 4
- “Changes in Version 185.81” on page 7
- “Changes in Version 185.68” on page 8
- “Open Issues in Version 185.81” on page 9
- “Not NVIDIA Issues” on page 12
- “Known Product Limitations” on page 22
Version 185.81 Highlights

This section provides highlights of version 185.81 of the NVIDIA Release 185 Driver for Windows Vista.

- What’s New in Release 185
- What’s New in Version 185.81
- Limitations in This Release

What’s New in Release 185

- New Product Support
- NVIDIA Control Panel Updates
- Display Driver Updates
- Video Updates
- CUDA Updates
- OpenGL Updates

New Product Support

Added support for the NVIDIA GeForce GTX 275.

NVIDIA Control Panel Updates

3D Settings
- Ambient Occlusion setting (new in the Manage 3D Settings page for Windows Vista)
  Ambient occlusion enhances depth perception and adds realism to 3D scenes by providing a soft shadow effect to objects based on their placement in the scene.
- SLI Antialiasing (new in the Manage 3D Settings page for Windows Vista)
  Now available under Windows Vista as well as Windows XP.

Display
- Set up Multiple Displays (revised under Windows Vista)
  In Release 185, when SLI mode is enabled, users can now select a display from different GPUs as long as the GPUs are in the same SLI group.
    - Displays must still be connected to the same GPU under Clone mode.
Quad SLI: When using GeForce X2, Quadro X2, or the GeForce GTX 295 graphics cards, only GPUs that have two display connectors can be used to drive displays. Typically, display connectors lined up on the same slot position are connected to the same GPU.

NVIDIA recommends connecting displays to the same GPU to shorten the driver reload time on the initial setup.

- Adjust Desktop Color Settings page (revised under Windows Vista)
  Applications now have the option of controlling the desktop color settings.

Video & Television
- HDCP Status
  New page for verifying whether the system is HDCP-capable

- Adjust TV Color Settings page (revised under Windows Vista)
  Applications now have the option of controlling the TV color settings.

Display Driver Updates

Device Support
Added support for EDID-like devices.

Hotplug Behavior
When hotplugging or hot-unplugging a digital display, the driver detects the display and then configures the multi-display mode and display resolution based on the recent record of the displays connected. If no record exists, then the driver applies default settings. A popup message appears at the system notification tray to alert the user of the change.

The automatic display configuration also occurs upon powering on the computer and booting into Windows Vista if the driver detects a change in display connections since the last Windows session.

Video Updates
- Compute-based DVD upscaling
- CUDA Video Encoder 1.1: Added support for CUDA-enabled GPUs with less than 32 cores to the NVIDIA Video Encoding library.

CUDA Updates
- CUDA 2.2
- CUDA Video Encoder V1.1: Added support for CUDA-enabled GPUs with less than 32 cores to the NVIDIA Video Encoding library.
OpenGL Updates

- Support for OpenGL 3.0
- Implemented NVX_shader_buffer_load (OpenGL Shading Language).

What’s New in Version 185.81

- Added support for the NVIDIA GeForce GTX 275.
- This driver version includes support for NVIDIA PhysX acceleration on all GeForce 8-series, 9-series and 200-series GPUs with a minimum of 256MB dedicated graphics memory (this driver package installs NVIDIA PhysX System Software v9.09.0408).
- See “Changes in Version 185.68” on page 8 for a list of resolved issues.

Limitations in This Release

The following are features that are not currently supported or have limited support in this driver release:

- **NVIDIA Control Panel Display Category**
  - The Graph tab on the Adjust Desktop Color Settings page is not available.
Changes in Version 185.81

The following sections list the changes made and issues resolved since driver version 182.68. The NVIDIA bug number is provided for reference.

Fixed Issues—Windows Vista 32-bit

Single GPU Resolved Issues

- GeForce GTX 295: Crysis Warhead Patch 1.1.1.710 (DirectX 10)–the game screen shrinks and shifts to the left corner of display when the resolution is changed to lower value than the native resolution. [528355]

Multi-GPU Resolved Issues

- [3-way SLI], GeForce 9800 GTX/nForce 750/780a SLI: Portal –there are white lines at the borders of the textures when the game is launched with default settings. [441377]
- [SLI], GeForce 9600 GT: Tomb Raider: Underworld–the game pauses continuously when SLI is enabled. [533193]
- [3xSLI], GeForce 8800 GTX/Ultra: Installing the driver on a 3-way SLI system takes a minimum of 3–4 minutes, and possibly longer if drivers have been previously installed on the system. [354847]

  The installation does complete in time—NVIDIA recommends that you do not interrupt the installation process, but wait for it to complete.
- nForce 760i SLI, GeForce 8400 GS: PhysX gets disabled after performing an INF install over a previous driver version. [510754]
- [3-way SLI]: The driver fails to install correctly when installing the driver over a previous version. [459180/470203]

  You must first uninstall the previous NVIDIA graphics driver from the Windows control panel under Programs (uninstall a program).
Changes in Version 185.68

The following sections list the changes made and issues resolved since driver version 182.50.
The NVIDIA bug number is provided for reference.

Fixed Issues—Windows Vista 32-bit

Single GPU Resolved Issues
• Far Cry 2 – Override Antialiasing from the NVIDIA Control Panel is not getting applied to the game. [486104]
• The TV format is not set properly from the NVIDIA Control Panel->Change signal or HD format page. [373501]

Multi-GPU Resolved Issues
• [SLI], GeForce GTX 280/260: Mass Effect–antialiasing levels fall back whenever the in-game resolution is switched to a lower resolution.[477335]
• nForce 760i SLI, GeForce 8400 GS: PhysX gets disabled after performing an INF install over a previous driver version. [510754]

Windows Vista 64-bit Issues

Single GPU Resolved Issues
• The TV format is not set properly from the NVIDIA Control Panel->Change signal or HD format page. [373501]
• 3xGeForce 9800 GTX: Saved profile does not load properly. [477263]
• GeForce 9600 GT: There is green/blue corruption when playing an H.264 formatted Blu-ray disk using Power DVD 8. [524145]

Multi-GPU Issues
• [Hybrid SLI], GeForce GTX 260/280+nForce 760/780a SLI: Fraps does not run if set to run at Windows launch in Hybrid SLI performance or save power modes. [443794]
Open Issues in Version 185.81

As with every released driver, version 185.81 of the Release 185 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others may have workaround solutions.

- “Windows Vista 32-bit Issues” on page 9
- “Windows Vista 64-bit Issues” on page 10

Windows Vista 32-bit Issues

Single GPU Issues

All GPUs
- Half Life 2: Episode 2—the in-game brightness is greatly reduced if Enhanced or Override AA is enabled from the NVIDIA Control Panel. [429254]

GeForce 9 Series
- GeForce 9800 GT: With Dualview mode enabled, the GPU runs at the highest performance level even when no video or 3D applications are running. [531538]

GeForce 8 Series GPUs
- GeForce 8800: Default custom resolutions cannot be created when using the DVI connection. [446476]
- GeForce 8600: HD resolutions higher than 720p are not available. [308627]

GeForce 7 Series GPUs
- GeForce 7600GS: There is no audio thru the SPDIF. [406176]

GeForce 6 Series GPUs
- GeForce 6100/6150: Flat panel settings cannot be changed with Clone mode enabled. [485979]

Multi-GPU Issues

All GPUs
- [SLI]: The PhysX option is disabled by default after driver installation. [544945]

GeForce 200 Series GPUs
- [3-way SLI], GeForce GTX 280/260: 3DMark06—the TV screen (component or S-Video) goes blank after launching the benchmark with SLI mode enabled. [491193]
Chapter 2: Release 185 Driver Issues

Open Issues in Version 185.81

• [SLI], GeForce GTX 280/260: At 2560x1600 resolution, the GPU clock speeds do not change when switching from single-display to Dualview display mode.

GeForce 9 Series GPUs
• [SLI], GeForce 9800 GTX: Mass Effect–there is a band of corruption on the edge of the screen when switching from a high resolution to a lower resolution. [433929]

Windows Vista 64-bit Issues

Single GPU Issues
• NVIDIA Control Panel: Adding a custom profile with an open bracket in the name results in an error. [437056]
• Half Life 2: Episode 2–the in-game brightness is greatly reduced if Enhanced or Override AA is enabled from the NVIDIA Control Panel. [429254]

GeForce 200 Series
• GeForce 200 Series: When entering custom resolution values from the Manage Custom Resolutions page, the values are not validated. [524691]
• GeForce GTX 295: Settings on the "Adjust desktop color settings" page are at 0% for the secondary Clone or Dualview mode display. [514218]
• GeForce GTX 280: Enemy Territory: QUAKE Wars–there is full-screen corruption throughout the game. [547933]

GeForce 9 Series
• GeForce 9800 GT: Lineage 2–the game world is extremely dark. [531486]

GeForce 8 Series
• GeForce 8800 GT/GTX: Default custom resolutions cannot be created when using the DVI connection. [446476]
• GeForce 8800 GTX, NVIDIA Control Panel: The user is unable to select Resize my Desktop while playing an HD DVD. [357674]
• GeForce 8400 GS: Screen size changes made from the NVIDIA Control Panel "Adjust screen size and position" page are not preserved after resuming from Hibernate/Standby. [544085]

GeForce 7 Series
• GeForce 7600GS: There is no audio thru the SPDIF. [406176]

GeForce 6 Series
• GeForce 6100/6150: Flat panel settings cannot be changed with Clone mode enabled. [485979]
Multi-GPU Issues

GeForce 200 Series
• [3-way SLI], GeForce GTX 280: Farcry2–there are black patches of corruption with SLI enabled at 2560x1600 resolution. [533524]

GeForce 9 Series
• [3-way SLI], GeForce 9800 GTX: Crysis (64-bit) (DirectX 9)– there is a lengthy pause or the system freezes when firing a weapon.
  This issue does not occur with the DirectX 10 version of the game, which is recommended.
• [SLI], GeForce 9800 GTX: Call of Duty:World at War–there is geometric corruption after applying Ambient Occlusion from the NVIDIA Control Panel. [526733]
• [SLI], GeForce 9600 GT, GeForce 8500/8400/8300: Changes made from the Resize HDTV Settings page are not saved after enabling SLI mode. [529759]

GeForce 8 Series
• [SLI], GeForce 8800 GTX: After resizing the desktop, the change is not preserved when you reboot the system. [529812]
• [SLI], GeForce 8600 GT: Gears of War (DirectX 10)–with SLI mode enabled, there is corruption and flickering with the default settings and in-game antialiasing enabled. [541836]

GeForce 7 Series
• [SLI], GeForce 7 Series: There is no confirmation popup when some changes are made in the NVIDIA Control Panel. [511417]

GeForce 6 Series
• [SLI], GeForce 6600: The SLI visual indicator does not display with OpenGL applications, such as Chronicles of Riddick, Enemy Territory: QUAKE Wars, and Quake 4. [457633]
Not NVIDIA Issues

This section lists issues that are not due to the NVIDIA driver as well as features that are not meant to be supported by the NVIDIA driver for Windows Vista.

- “Windows Vista Limitations” on page 12
- “Unsupported Features” on page 13
- “OpenGL Application Issues” on page 15
- “Application Issues” on page 16
- “Operating System Issues” on page 20

Windows Vista Limitations

These are behaviors that may be different from Windows XP and are related directly to the Windows Vista operating system.

- NVIDIA TurboCache

  Windows Vista now controls the allocation of system memory to the GPU for TurboCache functions. The Windows Vista Display Properties pages show the shared system memory (SSM), or how much memory is allocated for NVIDIA GPUs to use for TurboCache.

  For more information on graphics memory reporting under Windows Vista, visit http://www.microsoft.com/whdc/device/display/graphicsmemory.mspx.
Unsupported Features

The following are features and functionality that were available in driver releases supporting Windows XP, but are not–and will not be–available in driver releases for Windows Vista:

- High resolution scaling desktop (HRSD)
- MultiView Display Mode (for NVIDIA Quadro NVS graphics cards)
- NVKeystone
- Unified back buffer (UBB) controls
- OpenGL Video Overlays
  This is an operating system limitation.
  Vista window manager features will provide new ways of accomplishing overlays, but will require application porting.
- Overclocking
  GPU overclocking is no longer supported in the default GPU driver control panel. This feature is available in the NVIDIA System Tools software, which you can download from NVIDIA.com.
- GPU Temperature Monitoring
  Temperature monitoring is no longer supported in the default GPU driver control panel. This feature is available in the NVIDIA System Tools software, which you can download from NVIDIA.com.
- AGP Settings Adjustment
- Video Zoom
- Pan & Scan - the process of panning across the desktop in order to display a desktop on a monitor with lower resolution
- Per-display Desktop Color Setting Adjustments
  For Clone mode, the desktop color setting adjustments through the NVIDIA Control Panel can only be made across all displays in a system, and not on a per-display basis.
- Per-display Video Color Setting Adjustments
  For Dualview mode, the video color setting adjustments through the NVIDIA Control Panel can only be made across all displays in a system, and not on a per-display basis.
- Edge Blending
- Run display optimization wizard
- Run multiple display wizard
• Run television setup wizard
• nView Horizontal and Vertical Span Modes
  Due to architectural changes in the new Windows Vista Window Display Driver Model (WDDM), span mode cannot be supported in NVIDIA graphics drivers. NVIDIA recommends using the built-in Windows Vista multi-display modes.
• Display/Connection Wizard (such as was provided with Windows Media Center Edition)
• DVD/MPEG Extensions (such as was provided with Windows Media Center Edition)
• Audio Extensions (such as was provided with Windows Media Center Edition)
• NVIDIA nView Desktop Manager
  The nView Desktop Manager will not be included in drivers for GeForce products.
OpenGL Application Issues

The following are known compatibility issues for OpenGL applications developed under Windows XP:

- **Mixed GDI and OpenGL rendering does not work.**

  A number of applications use GDI to render UI components and object highlighting. This is not supported in the Windows Vista driver model.

  NVIDIA recommends converting GDI rendering to OpenGL.

  The following are some applications that are known to have this issue:

  - Maya 7.01
  - OneSpace Designer Modeling

- **Applications, Tools, and Benchmarks not Supported Under Windows Vista**

  - GLperf
  - 3ds max 8 (later releases may be supported)
  - CATIA V5R15 (V5R16 is supported)
  - PTC’s CDRS 2001

- **Front buffered rendering may be slow, especially when DWM is enabled.**

  Flushing the rendering queue while rendering to the front buffer may cause the window manager to recomposite. Applications should therefore minimize the frequency with which they flush the rendering queue.
Application Issues

- Counter Strike—the application crashes to the desktop if the resolution or bit-depth is changed from the in-game video options menu. [416582]
  This is an application issue, but the problem does not occur if you change the resolution or bit-depth from the game’s main menu and not while in a game.

- Star Wars: Knights Of The Old Republic 2—the game fails to launch, and an “application has stopped working” error message appears. [420115]
  This occurs because the application is not able to interpret the driver version correctly.

- Tiger Woods PGA Tour 2007–Fly-by shot before each hole blacks-out textures. [274697]
  NVIDIA is working with the developer to resolve this issue.

- City of Heroes—The mouse cursor does not display. [259256]
  This is an application issue that can be worked around in full-screen mode by adding “compatiblcursors 1” to the City of Heroes desktop shortcut.
  NVIDIA is pursuing a fix with the application developer.

- Sims 2—“Smooth Edges (AA)” option is not available with Release 100 drivers. [272477]
  This occurs because of an incorrect driver version check in the application.
  NVIDIA has worked around this issue in the operating system by changing the way the driver version is reported to this application.

- Warhammer 40k Dawn of War (all versions) does not run with Release 100 drivers. [273154]
  This occurs because of an incorrect driver version check in the application.
  NVIDIA has worked around this issue in the operating system by changing the way the driver version is reported to this application.

- Need for Speed Carbon—After upgrading with patch 1.3, the game crashes when launched. [290506]
  This is an issue with the application patch under Windows Vista.

- Nascar Simracing—the game crashes when launched. [270792]
  This is an issue with the application under Windows Vista.

- Call of Duty 2—Only solid colors render during game play when 4xAA is enabled. [257454]
  The application is not applying antialiasing properly. Please try selecting 2x AA, disabling antialiasing, or using NVIDIA Enhanced application or Override antialiasing modes.
  NVIDIA is pursuing a fix with the application developer.
• Age of Empires III—the game has rendering artifacts, such as textured squares for smoke. [258036]

• Flight Simulator X—pressing Alt+Tab to switch to the desktop does not work. [293729]

• Everquest 2– with NVIDIA driver versions 100.xx, the following error message appears: [273346]

"You currently have a (7.15.11.120) video card installed. We recommend that you download version 7772 drivers before playing Everquest.”

This occurs because the application is not checking the driver version correctly, but this does not affect game play. Please select "Continue Anyway” to launch the game. The problem does not occur with a previous Release 95 driver (xx.xx format).

NVIDIA is pursuing a fix with the application developer.

• Windows Vista 64-bit, [PhysX]: TheGameCreators PhysX Screen Saver doesn’t get installed properly. [491613]

This is not an NVIDIA issue, but a bug in Vista 64-bit OS that affects the installation of many screen savers. To work around, locate the corresponding .scr file for the screen saver, then right-click and select Install.

Note: PhysXscreensaver.scr is located in \windows\SysWOW64.

• GeForce 9800 GTX: Flight Simulator Acceleration (DirectX 10) - the sky box does not render correctly when zoomed all the way out. [436158]

This is not an NVIDIA bug, but rather an application issue.

• GeForce 9800 GTX: Flight Simulator Acceleration (DirectX 10) - there is no antialiasing preview window. [436156]

• GeForce 9800 GX2: Fury (DirectX 10) – the character names flicker. [384917]

This is not an NVIDIA bug, but rather an application issue.

• GeForce 9600 GT, GeForce 9800 GX2, GeForce 8800 GTX/Ultra/GTS/GT: Assassin’s Creed: Directors Cut - the shadow flickers. [400541]

This is not an NVIDIA bug, but rather an application issue.

• GeForce 9600 GT: Crysis (DirectX 9) - there is corruption in the game. [399261]

This is not an NVIDIA bug, but rather an issue with the application issue. To avoid this issue, use the DirectX 10 option of the game.

• GeForce 8800 GTX: Tabula Rasa–there is ghosting on the game character while standing below the drop ship after enabling refraction from the game control panel. [357271]

This is not an NVIDIA bug, but rather an application issue.

• GeForce 8800 GT: Company of Heroes DirectX10 - the application crashes when MSAA is enabled. [346495]
Chapter 2: Release 185 Driver Issues

This is a Fraps 2.9.2 issue.

- GeForce 8 Series: Quake 4–there are white flashing artifacts. [273476]
- GeForce 8800: City of Heroes–there are corrupted textures in certain missions.[290659]

This has been fixed with the latest patch for the game.

- GeForce 8800: Ghost Recon - Advanced Warfighter–the gadget side bar bleeds through on the right side of the screen during game play. [281304]
- GeForce 8800 GTX: Star Wars Battle front 2–screen corruption occurs at 2560x1600 resolution. [325457]
- GeForce 8800 GTX, GeForce 7900 GTX: Neverwinter Nights 2–the mini map loses its background when the resolution is changed. [273788]
- GeForce 8800 GTX: Civilization 4–setting in-game 16x antialiasing AA disables all antialiasing.[303283]
- GeForce 8800 GTX: Flight Simulator–the terrain changes to low resolution when switching from Air Traffic-controlled to player-controlled airplane.[304840]
- GeForce 8800 GTX: Scarface–corruption during the game.[290007]
- GeForce 8800 GTX: Neverwinter Nights 2–only overlays render when switching to 2560x1600 using 8xAA. [302061, 314148]
- GeForce 8800 GTX: Command & Conquer:Tiberium Wars–the game crashes at 2560x1600 resolution, with 8x antialiasing enabled, and when in-game settings are set to the highest levels. [308248/316633]
- GeForce 8800 GT/GTX: Crysis (DirectX 10) - game performance drops after switching to a higher resolution and then switching back to the lower resolution. [368740]
- GeForce 7900: Flight Simulator X – rendering becomes corrupted after pressing the Windows key. [293727 296232]
- GeForce 7600: Rainbow Six Vegas – antialiasing is not applied when setting antialiasing override mode in the NVIDIA Control Panel. [294215]

Antialiasing is supported in this application only on GeForce 8 series and higher GPUs.

- GeForce 8500/8400/8300: Corruption occurs while running MicroSoft SDK Basic HLSL sample application. [302209]
- GeForce 8500/8400/8300: Dark Messiah of Might and Magic–an application error occurs when quitting the game. [300980]

This is an issue with the application.

- GeForce 8500/8400/8300: Elder Scrolls IV: Oblivion–the game crashes after restoring from minimization. [296725]
- GeForce 7900 GTX: CPU usage is extremely high during H.264 playback of Blu-ray disc, resulting in dropped frames. [304480]
• GeForce 7300GS: Rainbow Six Vegas—the display turns black at 1600x1200 resolution.[302319]

• GeForce 7300 GT: Far Cry—geometry is corrupted during rendering of blood.[304348]

• GeForce 7300 GT: Company Of Heroes—the shadows are corrupt at the default game settings with SLI mode enabled. [346746]

  This is an issue with the application.

• 322008 GeForce 8600 GT: Battlefield 2—the game crashes to desktop when set to 1900x1440 resolution 8x antialiasing.

  This problem occurs only when you have FRAPS 2.6.4 installed. It does not occur with FRAPS 2.8.2

• 316403 GeForce 8 Series, GeForce 7 Series: NV SDK 9.5 Mandelbrot set fails to render fractal.

  This is an issue with the NV SDK and will be fixed in a newer build.

• GeForce 8 Series: Prince of Persia—half the screen turns black and the other half turns white during resolution changes. [299484]

  This is an issue with the application.

• GeForce 8800 GTX: Company of Heroes (DirectX 10)—the game crashes when the maximum settings are applied at 2560x1600 with 8xAA enabled. [321631]

  This is an issue with the application.

• GeForce 7950 GX2: Flight SimX – water has artifacts. [292168]

• GeForce 6600: Stars Wars Battlefront2—blue-screen crash occurs when High settings are used.[302213]

• GeForce 6200: Call of Juarez—there is corruption at all resolutions. [356711]

• GeForce 6100/6150: Gothic—there is flickering with a white screen when using the default settings.[303552]

• GeForce 6200: Star Wars Empire at War—the game menu buttons are corrupt. [357713]

**Application Issues Under SLI Mode**

• [SLI]: NVIDIA SLI scaling on some applications under Windows Vista may not be as much as under Windows XP. Some applications include "S.T.A.L.K.E.R., Half-Life 2: Lost Coast, Company of Heroes, Battlefield 2142, Call of Duty 2, Hitman: Blood Money, and Far Cry: [302534 290803]

  This is an application issue which has been resolved with the latest Steam patch.

• [SLI], GeForce 9800 GX2: The Witcher—a blooming light shines through objects with SLI mode enabled. [396736]
This is not an NVIDIA bug, but rather an application issue.

- [Quad SLI], GeForce 9800 GX2: Test Driver Unlimited—there is pausing/hitching during the cut scene transitions. [395207]
- [SLI], GeForce 8800 GTX, GeForce 8600, GeForce 6 Series: Company of Heroes—there is corruption in the ground textures. [294118]
  This is an application issue, and has been fixed with the latest patch for the game.
- [SLI], GeForce 8800 GTX: Battlefield 2 and Battlefield 2142—the games crash when exiting back to the menu after being played at 2048x1536 using 8xAA or higher. [301985]
  This is an issue with the application.
- [SLI], GeForce 8800: While uninstalling driver the driver, the error message "Windows host process (Rundll32) has stopped working" appears. [294219 280920]
- [SLI], GeForce 8800: Splinter Cell Double Agent—the game crashes when minimized and then invoked again. [294205]
- [SLI], GeForce 8800: Battlefield 2142 – 8xAA cannot be set from the game control panel.[294231]
- [SLI], GeForce 7900 GTX:Microsoft Flight simulator X – corruption and flickering occur while flying close to land objects. [293882]

### Operating System Issues

- World of Warcraft – there is a 60% drop in performance when running the game in windowed mode with SLI or multi-GPU mode enabled. [289427]
  This is due to a limitation of the Windows Vista operating system and affects all multi-GPU systems. NVIDIA is investigating a workaround for this performance problem.
- GeForce 8800 GTS 320MB: The driver reports incorrect video memory (256 MB) in the Windows Vista Display Properties panel. [290811]
  However, the NVIDIA Control Panel properly reports the dedicated video memory as 320 MB.
- GeForce 8800 GTX, GeForce 7900 GTX: Company of Heroes crashes when trying to load the Cherbourg level.[284273]
  This is an issue with the operating system. A QFE (software patch) from Microsoft is being worked on to fix this issue.
• GeForce 7300 GT: Windows Vista desktop gadgets are blank (only outline visible) after changing the primary display while playing an HD DVD or Blu-ray disc.[303482]
  This is an issue with the operating system.

• GeForce 6200: Foxbear–there is corruption on the Dualview secondary display.[302709]
  This is an issue with the operating system.

• [SLI], GeForce 8800 GTX: While installing the graphics driver, the message “Incompatible display adapter has been disabled” appears and the display turns blank. [318173]
  This is an issue with the operating system.

• When S-video and DVI displays are set up in Clone mode and rotated 90 degrees, the screen turns black.[304267, 283546]
  This is an issue with the operating system.

• GeForce 8800 GTX: DreamScene–running the application results in a “Display driver has stopped responding” error message. [295017]
  This is an issue with the OS.

• GeForce 8300 GS: With Aero-glass enabled, the screen flickers after rotating the display 90 degrees with S-Video as the primary display. [317347]
  This is an issue with the OS.
Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

- “GeForce GTX 295 Fan Control and NVIDIA Control Panel Performance Group version 6.03.06.00” on page 22
- “1280x1024 @ 60 Hz not Available on BenQ FP241W Monitors” on page 22
- “Image Sharpening Control not Available with GeForce 8 Series and later GPUs” on page 22
- “Gigabyte GA-6BX Motherboard” on page 22

GeForce GTX 295 Fan Control and NVIDIA Control Panel Performance Group version 6.03.06.00

The GeForce GTX 295 fan control does not function properly when using the NVIDIA Control Panel Performance Group version 6.03.06.00. For proper fan control, use version 6.03.12.00 or later.

1280x1024 @ 60 Hz not Available on BenQ FP241W Monitors

Even though the monitor EDID lists 1280x1024 @ 60 Hz, the screen turns blank when using an HDMI connection. This is an issue with the monitor and not the NVIDIA driver.

Because of this issue with the monitor, the NVIDIA driver blocks the problem mode (1280x1024 @ 60 Hz) and makes it unavailable.

Image Sharpening Control not Available with GeForce 8 Series and later GPUs

With GeForce 8 Series and later graphics cards, the Image sharpening slider on the NVIDIA Control Panel-> Display->Adjust Desktop Color Settings page is grayed out.

This control is intentionally disabled because image sharpening is not supported on GeForce 8 series and later GPUs.

Gigabyte GA-6BX Motherboard

This motherboard uses a LinFinity regulator on the 3.3-V rail that is rated to only 5 A—less than the AGP specification, which requires 6 A. When diagnostics or applications are running, the temperature of the regulator rises, causing the voltage to the NVIDIA chip to drop as low as 2.2 V. Under these circumstances, the regulator cannot supply the current on the 3.3-V rail that the NVIDIA chip requires.

This problem does not occur when the graphics board has a switching regulator or when an external power supply is connected to the 3.3-V rail.
This chapter covers the following main topics:

- “Hardware and Software Support” on page 23
- “Driver Installation” on page 26

### Hardware and Software Support

#### Supported Operating Systems

The Release 185 driver, version 185.81, has been tested with Microsoft Windows® Vista RTM OS builds version 6000 or higher, and supports both 32-bit and 64-bit versions of Windows Vista Editions:

- Windows Vista Home Basic
- Windows Vista Home Premium
- Windows Vista Business
- Windows Vista Enterprise Edition
- Windows Vista Ultimate
## Supported NVIDIA Products

Table 3.1 lists the NVIDIA products supported by the Release 185 driver, version 185.81

Driver Installation

Minimum Hard Disk Space

The hard disk space requirement for 32-bit is minimum 120 MB for English-only, and 185 MB for International.

The hard disk space requirement for 64-bit is minimum 170 MB for English-only, and 230 MB for International.

Before You Begin

If you have previously installed NVIDIA nTune, NVIDIA recommends that you uninstall nTune before installing this driver. After the driver install is complete, you can reinstall NVIDIA nTune.

Installation Instructions

1 Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.

2 Click the driver download link.

3 The license agreement dialog box appears.

4 Click Accept if you accept the terms of the agreement, then either open the file or save the file to your PC and open it later.

5 Extract the zip files to a temporary folder on your PC.

6 Open the NVIDIA driver installation .EXE file to launch the NVIDIA InstallShield Wizard.

7 Follow the instructions in the NVIDIA InstallShield Wizard to complete the installation.

Note: After the driver installation, Windows may default to 16-bpp color and disable the Desktop Window Manager (DWM). To work around this issue, set the color to 32-bpp and then reboot the PC.
This chapter details the Windows modes supported by the Release 185 driver for NVIDIA products. It contains these sections:

- “General Mode Support Information” on page 28
- “Default Modes Supported by GPU” on page 29
- “Modes Supported by TV Encoders” on page 33
General Mode Support Information

The NVIDIA graphics driver includes a standard list of display modes that are supported by default. These modes are listed in the section “Default Modes Supported by GPU” on page 29.

The actual modes available depend on the capabilities of the display. In addition, the NVIDIA graphics driver has a “dynamic EDID detection” capability and will make available additional modes that are listed in the display EDID, provided the graphics hardware can support it.

The NVIDIA graphics driver also supports the high resolutions available with the displays listed in Table A.1 as well as the non-standard modes listed in Table A.2.

Table A.1  Modes Supported for High Resolution Displays

<table>
<thead>
<tr>
<th>Display</th>
<th>Maximum Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apple 30” Cinema HD Display (Dual link DVI)</td>
<td>2560x1600 @ 60 Hz</td>
</tr>
<tr>
<td>Dell WFP 3007 (Dual Link DVI)</td>
<td>2560x1600 @ 60 Hz</td>
</tr>
<tr>
<td>HP LP3065 dual-link DVI flat panel</td>
<td>2560x1600 @ 60Hz</td>
</tr>
</tbody>
</table>

Table A.2  Non-standard Modes Supported

<table>
<thead>
<tr>
<th>Resolution</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1680 x 1050</td>
<td></td>
</tr>
<tr>
<td>1366 x 768</td>
<td></td>
</tr>
</tbody>
</table>
Default Modes Supported by GPU

This section lists the modes that are included by default in the driver INF for the following product families:

- “GeForce 200, 100, 9 Series, 8 Series, 7 Series, 6 Series, and nForce 7xx/6xx GPUs” on page 30

Understanding the Mode Format

Figure A.1 gives an example of how to read the mode information presented in this section.

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Color Depth</th>
<th>Refresh Rates</th>
</tr>
</thead>
<tbody>
<tr>
<td>1024 x 768</td>
<td>32 60 70 72 75 85 100 120 140 144 150 170 200</td>
<td></td>
</tr>
</tbody>
</table>

**Meaning:**
- Resolution: 1024 x 768
- Color depth: 32 bpp
- Refresh rates: 60 Hz, 70 Hz, 72 Hz, 75 Hz, 85 Hz, 100 Hz, 120 Hz, 140 Hz, 144 Hz, 150 Hz, 170 Hz, and 200 Hz

**Note:**
- Horizontal spanning modes of 3840x1080 and above, and vertical spanning modes of 1920x2160 and above generally require at least 32 MB of video memory at 32 bpp.
- An “i” next to the refresh rate indicates an interlaced refresh rate.
## GeForce 200, 100, 9 Series, 8 Series, 7 Series, 6 Series, and nForce 7xx/6xx GPUs

This section lists the supported display resolutions, color depths, and refresh rates for the products listed in Table 3.1 on page 24.

The driver supports manual overscan correction for component and DVI outputs. See the *ForceWare Graphics Driver User’s Guide* for instructions on how to use the overscan correction features in the control panel.
