This edition of Release Notes describes the Release 430 family of NVIDIA® graphics drivers (versions 430.xx to 434.xx) for Microsoft® Windows® 10. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

Structure of the Document

This document is organized in the following sections:

- “Release 430 Studio Driver Changes” on page 2 gives a summary of changes, and fixed and open issues in this version.

- “The Release 430 Studio Driver” on page 23 describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.

Changes in this Edition

This edition of the Release Notes for Windows includes information about NVIDIA graphics driver version 430.86 WHQL and lists changes made to the driver since driver version 419.67.

These changes are discussed beginning with the chapter “Release 430 Studio Driver Changes” on page 2.
This chapter describes open issues for version 430.86 WHQL, and resolved issues and driver enhancements for versions of the Release 430 driver up to version 430.86 WHQL.

The chapter contains these sections:
- “Version 430.86 WHQL Highlights” on page 2
- “Changes and Fixed Issues in Version 430.86” on page 12
- “Driver Security” on page 11
- “Open Issues in Version 430.86 WHQL” on page 13
- “Issues Not Caused by NVIDIA Drivers” on page 14
- “Known Product Limitations” on page 15

Version 430.86 WHQL Highlights

This section provides highlights of version 430.86 WHQL of the NVIDIA Release 430 Driver for Windows 10.
- What’s New in the NVIDIA Studio Driver Version 430.86 WHQL
- What’s New in Release 430
- Limitations in This Release
- Advanced Driver Information

---

1. Includes support for Windows 10 May 2019 Update (Version 1903) (19H1)
Existing Support

This release supports the following APIs:

- Open Computing Language (OpenCL™ software) 1.2 for NVIDIA® Kepler™ and later GPUs
- OpenGL® 4.6
- Vulkan® 1.1
- DirectX 11
- DirectX 12

What’s New in the NVIDIA Studio Driver Version 430.86 WHQL

NVIDIA Studio Drivers provide artists, creators and 3D developers the best performance and reliability when working with creative applications. To achieve the highest level of reliability, Studio Drivers undergo extensive testing against multi-app creator workflows and multiple revisions of the top creative applications from Adobe to Autodesk and beyond.

Applications

Provides the optimal experience for the latest releases of top creative apps, including Autodesk Maya 2019, 3ds Max 2020, Arnold 5.3.1.0, Blackmagic Design DaVinci Resolve 16, and Daz 3D Daz Studio.

Hardware

- Adds support for GeForce GTX 1650 desktop, and GeForce GTX 1660 Ti and GTX 1650 notebook GPUs.
- Adds support for ten new G-SYNC compatible monitors.
- Adds support for Oculus Rift S and HTC VIVE Pro Eye HMDs.

Other

- Adds support for Windows 10 May 2019 Update (including Variable Rate Shading)
- Adds support for the latest driver security updates
  
  See the NVIDIA Security Bulletin 4797 for details.
  See also the section “Driver Security” on page 12 for actions to take to mitigate vulnerabilities.
- NVIDIA Control Panel -> Set Up Multiple Displays page
  
  Added controls for merging two portrait monitors into a third landscape monitor.
- See also “Changes and Fixed Issues in Version 430.86” on page 12.
Chapter 2: RELEASE 430 STUDIO DRIVER CHANGES

Software Module Versions

- nView - 149.77
- HD Audio Driver - 1.3.38.16
- GeForce Experience - 3.19.0.94
- CUDA - 10.1
- Standard NVIDIA Control Panel - 8.1.940.0
- DCH NVIDIA Control Panel - 8.1.954.0

Application Profiles

Added or updated the following application profiles:

- Adobe Dimension

Application SLI Profiles

Added or updated the following SLI profiles:

- Anthem
- BattleTech
- Breathedge – AFR enabled for Turing GPUs
- Call of Cthulhu - AFR enabled for Turing GPUs
- Darksiders 3 - AFR enabled for Turing GPUs;
- DayZ
- Deliver Us The Moon: Fortuna
- Dying Light: Bad Blood
- Farming Simulator 2019
- God's Trigger
- Hunt: Showdown
- Imperator: Rome
- Insurgency Sandstorm
- Resident Evil 7
- Shadow of the Tomb Raider
- Tales of Vesperia: Definitive Edition
- Tropico 6
Chapter 2: RELEASE 430 STUDIO DRIVER CHANGES

What’s New in Release 430

For these release notes, the new items are the same as those documented under What’s New in the NVIDIA Studio Driver Version 430.86 WHQL.

Discontinued Support

► 3D Vision

Beginning with Release 430, the NVIDIA driver no longer supports the following 3D Vision technologies and features:

• NVIDIA 3D Stereoscopic Driver, including the 3D Vision driver and USB (emitter) driver

• NVAPI-based stereo APIs for Direct3D applications.

► NVIDIA Kepler GPUs for Notebooks

Beginning with Release 430, the NVIDIA driver no longer supports NVIDIA GPUs for notebooks based on the Kepler architecture.

► 32-bit Operating Systems

Beginning with Release 396, NVIDIA is no longer releasing Game Ready drivers for 32-bit operating systems for any GPU architecture.

Limitations in This Release

The following features are not currently supported or have limited support in this driver release:

Connecting Displays to NVIDIA Turing GPUs in SLI Mode

To use SLI with NVIDIA Turing GPUs, all displays must be connected to the master GPU.

Behavior Change in NvEncCreateBitstreamBuffer API of Video Codec SDK

In the NVIDIA driver, Release 415 and later, the behavior of the Video Codec SDK API (NvEncCreateBitstreamBuffer) has been changed to return NV_ENC_ERR_UNIMPLEMENTED instead of NV_ENC_SUCCESS when the encoder instance is configured to run in the motion estimation-only mode. As an indirect consequence of this change, the AppEncME sample application from the Video Codec SDK prior to SDK version 8.2.16 will crash due to a bug in the NvEncoder class.

The latest version of the SDK fixes this bug that affects the AppEncME sample application. NVIDIA recommends downloading the latest version from https://developer.nvidia.com/nvidia-video-codec-sdk.
Turing GPU Driver Installation on Windows 10

Drivers for Turing GPUs will not be installed on systems with Windows 10 RS2 or earlier. This includes Windows 10 Threshold 1, Threshold 2, Redstone 1, and Redstone 2 operating systems.

Crescent Bay and OSVR Headsets on Multiple GPU Systems

With Release 367 and future NVIDIA drivers, Crescent Bay and Open Source Virtual Reality development kit headsets will not work with VRWorks Direct Mode in systems that contain GPUs from multiple vendors (for example, NVIDIA and Intel). For such systems, please disable the Intel integrated graphics (from the system BIOS) in order to use Direct Mode.

Experimental OpenCL 2.0 Features

Select features in OpenCL 2.0 are available in the driver for evaluation purposes only. The following are the features as well as a description of known issues with these features in the driver:

► Device side enqueue

• The current implementation is limited to 64-bit platforms only.

• OpenCL 2.0 allows kernels to be enqueued with global_work_size larger than the compute capability of the NVIDIA GPU. The current implementation supports only combinations of global_work_size and local_work_size that are within the compute capability of the NVIDIA GPU.

The maximum supported CUDA grid and block size of NVIDIA GPUs is available at http://docs.nvidia.com/cuda/cuda-c-programming-guide/index.html#compute-capabilities. For a given grid dimension, the global_work_size can be determined by CUDA grid size x CUDA block size.

• For executing kernels (whether from the host or the device), OpenCL 2.0 supports non-uniform ND-ranges where global_work_size does not need to be divisible by the local_work_size. This capability is not yet supported in the NVIDIA driver, and therefore not supported for device side kernel enqueues.

► Shared virtual memory

• The current implementation of shared virtual memory is limited to 64-bit platforms only.
Advanced Driver Information

This section contains the following additional information about the driver:

- Differing GPU Voltages in SLI Mode
- 3D Compatibility Mode
- Help for Resizing Your HDTV Desktop
- Understanding the DirectX Information Shown in the NVIDIA System Information Window

Differing GPU Voltages in SLI Mode

When non-identical GPUs are used in SLI mode, they may run at different voltages. This occurs because the GPU clocks are kept as close as possible, and the clock of the higher performance GPU is limited by that of the other. One benefit is that the higher performance GPU saves power by running at slightly reduced voltages.

An end-user gains nothing by attempting to raise the voltage of the higher performance GPU because its clocks must not exceed those of the other GPU.

3D Compatibility Mode

3D Compatibility Mode is an NVIDIA proprietary rendering mode for 3D Vision that improves the 3D experience for many key DirectX 10 and 11 games. NVIDIA continues to add game support with new driver versions.

Requirements and Compatibility

- Games must be run in DirectX 10 or DirectX 11 mode.
- Not compatible with 3D Vision Surround.

Switching Compatibility Modes

Games with 3D Compatibility Mode will launch in this mode by default. You can switch between 3D Compatibility mode and standard 3D Vision mode as follows:

1. Before starting the game, enable Advanced In-game Settings in the NVIDIA Control Panel:
   a. Open the NVIDIA Control Panel and navigate to the Stereoscopic 3D->Set up stereoscopic 3D page and click Set Keyboard Shortcuts.
   b. Click the Show advanced in-game settings arrow if the section is not expanded, then select Enable advanced in-game settings.
   c. Click OK.

2. Press Ctrl+Alt+F11 during the game to toggle between 3D Compatibility mode and standard 3D Vision mode.
Help for Resizing Your HDTV Desktop

The best way to resize the screen in order to view the entire content is to use the controls provided by the display hardware. Click the link on the Size tab to view a guide to changing the settings on your display hardware.

The resize controls on the NVIDIA Control Panel are provided in case satisfactory results cannot be achieved using the controls on the display.

After resizing the HDTV desktop using the NVIDIA Control Panel Resize controls, the new custom resolution created is now added to the list of available resolutions for that display, and also added to the resolution list within the game or application.

The method for resizing the HDTV desktop was improved to provide better image quality when applying underscan. This method results in a new custom resolution being created which needs to be selected from games or applications to apply the resizing. In the example displayed in the following screen shot, the underscan has created a new resolution (1216 × 682). Although this resolution looks different, it is still in HD format.
Chapter 2: Release 430 Studio Driver Changes

Remember to select this resolution in your game or other application in order to take advantage of it.

![Resize](image)

**Note:** Some games or applications may not support the new resolution.

Understanding the DirectX Information Shown in the NVIDIA System Information Window

The System Information window—accessed by clicking System Information at the bottom left corner of the NVIDIA Control Panel—provides technical information about the NVIDIA graphics cards and driver installed in the system.

It also provides the following system information:

- **Operating system**: For example, “Windows 7 Enterprise, 64-bit”
- **DirectX runtime version**: For example, “11.0”

*In order to use the version of DirectX reported in the System Information window, the NVIDIA GPU and graphics driver must also support that DirectX version.*

This information is provided in the Graphics card information section of the System Information window as follows:

- **DirectX support**
  (Provided in previous driver versions)
  This is the DirectX version that is supported by the NVIDIA graphics hardware and driver.

- **Direct3D API version**
  (Provided in later driver versions, for Windows 7 and later.)
  This is the Direct3D version that is supported by the NVIDIA graphics hardware and driver. The API version is expressed in terms of Direct3D – the graphics subsystem component of DirectX.
Direct3D feature level

(Provided in later driver versions, for Windows 7 and later)

Direct3D feature levels describe a subset of features within the Direct3D API version that are supported by the NVIDIA graphics hardware and driver.
Driver Security

Follow these safe computing practices:

- Only download or execute content and programs from trusted third parties.
- Run your system and programs with the least privilege necessary. Users should run without administrator rights whenever possible.
- When running as administrator, do not elevate UAC privileges for activities or programs that don’t need them.

This section describes additional actions to take to mitigate specific known security issues.

Restricting/Enabling Access to GPU Performance Counters

The NVIDIA graphics driver contains a vulnerability (CVE-2018-6260) that may allow access to application data processed on the GPU through a side channel exposed by the GPU performance counters. GPU performance counters are needed by developers in order to use NVIDIA developer tools such as CUPTI, Nsight Graphics, and Nsight Compute. In order to address CVE-2018-6260 the driver (starting with version 419.67) automatically disables access for non-admin users.

For more information about CVE-2018-6260 visit the NVIDIA Security Bulletin 4772.

Access to GPU performance counters can be enabled for non-admin users who need to use NVIDIA developer tools. Enabling access to GPU performance counters can be accomplished through the NVIDIA Control Panel->Developer->Manage GPU Performance Counters page. Refer to the Developer->Manage GPU Performance Counters section of the NVIDIA Control Panel Help for instructions.
Changes and Fixed Issues in Version 430.86

The following sections list the important changes and the most common issues resolved in this version. This list is only a subset of the total number of changes made in this driver version. The NVIDIA bug number is provided for reference.

Fixed Issues in this Release

► [Quadro RTX 5000][Photoshop v20.0.4]: The application may crash occur. [2550087]
► [Titan RTX][Maya 2018]: The application crashes when rendering with REDSHIFT render window. [200510997]
► [OptiX][Arnold]: Errors occur with large shader disk cache. [2551569]
► [OptiX 6][Arnold]: Switching from 1x GPU to 2x GPUs (of the same GPU model) triggers a recompile of every program. [2549069]
► [OptiX][Arnold]: The startup time on the GTC robot scene takes significantly longer with PTX encryption than without the encryption. [2543391]
► [OptiX][Arnold]: The application may crash. [2481203]
► [OptiX][Arnold]: Startup time with cold shader cache is over one minute. [2399934]
► [Resolve Studio]: UHD performance has dropped. [2532482]
► [Cinema 4D]: Modulo operation produces incorrect result. [2494615]
► [Premiere Pro]: OpenGL driver exception occurs when launching the application. [2494092]
► [OpenGL][Modo v12]: Slow frame rendering when using “0x205f7e3b” profile. [2187572]
► [NVEnc][Resolve Studio]: Errors occur when encoding H.265 content. [2479871]
► [Vulkan driver][Octane Renderer]: Vulkan reports the wrong number of physical devices. [2417633]
► [OpenGL][Vulkan][Substance Painter & Designer]: Inter-operability memory sharing is not working correctly. [2309718]
► GeForce Experience Freestyle no longer detects World of Warships as a supported game. [2587083]
► [Adobe Premier Pro]: The application may crash or experience TDR events on some systems. [2557111]
► [GeForced RTX 2080][Notebook][Resolume Arena 6]: Slow performance in the game when using dual 4k output. [2548168]
Open Issues in Version 430.86 WHQL

As with every released driver, version 430.86 WHQL of the Release 430 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others may have workaround solutions.

*For notebook computers, issues can be system-specific and may not be seen on your particular notebook.*

Windows 10 Issues

- [NVIDIA Control Panel]: When the 3D Settings page->Vertical Sync setting is set to **Adaptive Sync (half refresh rate)**, V-Sync works only at the native refresh rate after rebooting the system. [2543187]
- [Grand Theft Auto V]: Brief flickering/corruption occurs in the game when MSAA is used. [2583604]
- [Forza Horizon 4]: The game may crash when driving through tunnels. [200515120]
- [Tom Clancy’s The Division II]: The game may crash when played in DirectX 12 mode. [2587043/200406322]
Issues Not Caused by NVIDIA Drivers

This section lists issues that are not due to the NVIDIA driver as well as features that are not meant to be supported by the NVIDIA driver.

➤ “Windows 10 Considerations” on page 14
➤ “Operating System Issues” on page 14
➤ “Application Issues” on page 14

Windows 10 Considerations

Cross-adapter Clone Mode

Under Windows 10, clone mode across graphics processors is handled by the Windows OS, and not by the NVIDIA driver. Consequently, there are no controls for cross-adapter clone mode in the NVIDIA Control Panel under Windows 10.

Functionality of some display controls in the NVIDIA Control Panel may be affected if cross-adapter clone mode is enabled through the Windows Control Panel. In this case, use the Windows Control Panel to adjust display settings.

Optimus Systems

Because cross-adapter clone mode is handled by the Windows 10 OS, there are no display controls in the NVIDIA Control Panel if no display is connected to the NVIDIA GPU on Optimus notebooks.

Operating System Issues

➤ [Windows 10 Fall Creators Update][HDTV]: 12 bpc is automatically applied even on HDTVs that support only 8 bpc, resulting in a scrambled display. [2007663]

To work around, open the NVIDIA Control Panel->Change Resolution page, select “Use NVIDIA color settings”, then set the Output color depth to 8 bpc.

Application Issues

Fixed Frame Rate Games

Some games and applications are designed to run at a fixed frame rate, and consequently do not take advantage of NVIDIA G-Sync. To prevent issues, G-Sync may be disabled for those applications.
Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

▶ “Windowed NVIDIA G-SYNC is Disabled During Video Playback on a Multi-monitor System” on page 16
▶ “GPU Temperature Reported Incorrectly on Optimus Systems” on page 16
▶ “Damaged or Missing WMI Service Prevents NVIDIA Driver Installation” on page 17
▶ “Total Available Graphics Memory Reported Incorrectly” on page 17
▶ “Increasing 4-way SLI/Multi-GPU Performance” on page 18
▶ “No PhysX Acceleration Using the GPU” on page 19
▶ “NVIDIA PhysX System Software Cannot Be Installed or Uninstalled in Windows Safe Mode” on page 19
▶ “Do Not Use Windows Rollback for Graphics Drivers” on page 19
▶ “Uninstalling Drivers Using Device Manager is Not Supported” on page 19
▶ “Changing Primary Display Across SLI GPUs Slower Than Expected” on page 20
▶ “Using HDMI Audio with Displays That Have a High Native Resolution” on page 20
▶ “Using HDMI/DisplayPort Audio in Dualview or Clone Mode” on page 21
▶ “Flat Panel Scaling Controls Not Functional for Some TV Modes in Some Displays” on page 21
▶ “GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes” on page 21
▶ “1280 × 1024 @ 60 Hz Not Available on BenQ FP241W Monitors” on page 22
Windowed NVIDIA G-SYNC is Disabled During Video Playback on a Multi-monitor System

Issue

Beginning with Windows 10 April 2018 Update (RS4), NVIDIA G-SYNC is disabled during active video playback on multi-monitor systems.

Explanation

If hardware accelerated video is playing on one display and an application is launched on another display in windowed mode with NVIDIA G-SYNC or adaptive-sync enabled, the video stutters. This is the result of desktop compositing on displays with differing refresh rates.

To prevent the video stutter in this scenario, the driver disables NVIDIA G-SYNC during active video playback, but re-enables G-SYNC if the video is paused or closed.

Note: The issue can also occur when displays are set to different refresh rates, even when G-SYNC is not used. To resolve in this case, make sure all displays are set to the same refresh rate.

GPU Temperature Reported Incorrectly on Optimus Systems

Issue

On Optimus systems, temperature-reporting tools such as Speccy or GPU-Z report that the NVIDIA GPU temperature is zero when no applications are running.

Explanation

On Optimus systems, when the NVIDIA GPU is not being used then it is put into a low-power state. This causes temperature-reporting tools to return incorrect values.

Waking up the GPU to query the temperature would result in meaningless measurements because the GPU temperature change as a result.

These tools will report accurate temperatures only when the GPU is awake and running.
Known Product Limitations

Damaged or Missing WMI Service Prevents NVIDIA Driver Installation

Issue

“Install failed” or “Install Failed, could not find compatible graphics hardware” message may appear during installation, even if the system has a compatible graphics card. This can occur when installing the NVIDIA driver or GeForce Experience software.

Cause

This issue could be the result of a corrupt WMI service on your system. The NVIDIA Installer requires the WMI service to properly install the driver or other NVIDIA software.

Resolution

You must repair the WMI service on your system in order to successfully install NVIDIA drivers. A future driver release will alert the user during installation that there is a problem with the WMI service on the system.

Total Available Graphics Memory Reported Incorrectly

Background-TAG Memory

In the Windows Display Driver Model (WDDM), Total Available Graphics (TAG) memory is reported as the sum of

- Dedicated Video Memory (video memory dedicated for graphics use)
- Dedicated System Memory (system memory dedicated for graphics use), and
- Shared System Memory (system memory shared between the graphics subsystem and the CPU).

The values for each of these components are computed according to WDDM guidelines when the NVIDIA Display Driver is loaded.

Issue

Some TAG-reporting APIs represent video memory using 32-bits instead of 64-bits, and consequently do not properly report available graphics memory when the TAG would otherwise exceed 4 gigabytes (GB). This results in under reporting of available memory and potentially undesirable behavior of applications that rely on these APIs to report available memory.
The under reporting can be extreme. For example, 6 GB might be reported as 454 MB, and 8 GB might be reported as 1259 MB.

**Driver Action for GeForce-based Graphics Systems**

On graphics systems with less than 2.75 GB of advertised physical memory, the NVIDIA display driver typically limits the Shared System Memory to maintain a TAG memory value of less than 4 GB\(^1\).

- This results in reliable reporting of sub-4 GB TAG memory on systems with less than 2.75 GB of advertised physical memory.
- On systems with 2.75 GB or more of advertised physical memory, you may see different reported TAG memory values between the NVIDIA Control Panel and other reporting APIs.

**Increasing 4-way SLI/Multi-GPU Performance**

**Issue**

With some games and applications, you may experience little to no performance gain or even a performance drop with 4-way SLI or multi-GPU configurations.

**Resolution**

1. Open the NVIDIA Control Panel, then click **Manage 3D Settings** from the navigation pane.
2. Click the **Global Settings** tab, then scroll to the **Power management mode** feature, click the corresponding list arrow and select **Prefer maximum performance**, then click **Apply**.

---

1. The WDDM guidelines dictate minimum and maximum values for the components, but the display driver may further constrain the values that are reported (within the allowed minimum and maximum).
No PhysX Acceleration Using the GPU

If after installing the PhysX System Software you find that there is no PhysX acceleration on supported applications, repeat the PhysX setup as follows:

1. Reboot the PC.
2. Open the NVIDIA Control Panel and then, under 3D Settings, click **Set PhysX configuration** to open that page.
3. Under **Select a PhysX processor**, verify that either **auto-select** or a specific NVIDIA GPU is selected.
4. Click **Apply**.

NVIDIA PhysX System Software Cannot Be Installed or Uninstalled in Windows Safe Mode

**Issue**

The NVIDIA PhysX System Software is not included in the NVIDIA driver installation/uninstallation under safe mode.

**Explanation**

The NVIDIA PhysX System Software installer is not compatible with Microsoft’s policy for Windows Safe Mode. Consequently, installation or uninstallation of the PhysX System Software under safe mode would fail. To allow installation or uninstallation of the graphics driver under safe mode, the NVIDIA PhysX System Software is blocked from the process.

Do Not Use Windows Rollback for Graphics Drivers

To reinstall a previous or older NVIDIA graphics driver, do not use the Windows rollback feature. This method will not reliably restore all the previous driver files.

Instead, use the Windows Add and Remove programs to remove the current driver, and then install the older driver using setup.exe.

Uninstalling Drivers Using Device Manager is Not Supported

**Issue**

On all supported versions of Microsoft Windows, uninstalling the NVIDIA driver using the Windows Device Manager may not remove associated files or applications.
Explanation

Microsoft has confirmed that this behavior is by design. If you wish to uninstall the NVIDIA driver, it is recommended that you do so using Add and Remove programs.

See the Microsoft KB article 2278714.

Changing Primary Display Across SLI GPUs Slower Than Expected

Issue

On an SLI system, switching the primary (or SLI focus) display when each display in the SLI group is connected to a different GPU takes longer than expected.

Explanation

On an SLI system with each SLI GPU driving a display, the display connected to the slave GPU is the primary display (also the SLI focus display). In order to switch the primary display to the one connected to the other GPU, the master and slave GPU configuration must also switch. In order to reassign which GPU is the master and which is the slave, the driver must be reloaded. It is the process of reloading the driver that takes the additional time.

Using HDMI Audio with Displays That Have a High Native Resolution

To use HDMI audio with some displays that have a native resolution higher than 1920 × 1080, you must set the display to a lower HD resolution.

Some HDMI displays have a native resolution that exceeds the maximum supported HD mode. For example, displays with a native resolution of 1920 × 1200 exceed the maximum supported HD mode of 1920 × 1080.

Applying this native mode results in display overscan which cannot be resized using the NVIDIA Control Panel since the mode is not an HD mode.

To avoid this situation and provide a better user experience, the driver treats certain TVs—such as the Viewsonic VX2835wm and the Westinghouse LVM-37w3—as a DVI monitor when applying the native mode. Because the driver does not treat the TV as an HDMI in this case, the HDMI audio is not used.
Using HDMI/DisplayPort Audio in Dualview or Clone Mode

Two Audio-enabled Ports

In a multi-display configuration where both HDMI/DisplayPort audio ports are enabled, only the primary display will provide the audio.

One Audio-enabled Port

In a multi-display configuration where only one audio port is enabled, such as when one display is a DVI display, then the HDMI/DisplayPort display can provide the audio whether it is the primary or secondary display.

Flat Panel Scaling Controls Not Functional for Some TV Modes in Some Displays

The NVIDIA Control Panel flat panel scaling controls on the “Adjust Size & Position” page are not intended to be used for TV modes, and normally the controls are not available for TV or HDTV displays.

However, Microsoft requires that certain TV/HDTV modes be available for all digital displays, including DVI and HDMI, even if they are not HDTV.

While the NVIDIA flat panel scaling controls are available for those displays, they will not be functional for the TV modes that appear in compliance with the Microsoft requirements. The affected modes are as follows:

- 1920 × 1080i @ 50/59.94/60 Hz
- 1280 × 720p @ 50/59.94/60 Hz
- 720 × 480p @ 59.94/60 Hz
- 720 × 576p @ 50 Hz

GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes

This is a hardware limitation with desktop and older notebook GPUs, and not a software bug. When multiple displays are connected and active, the GPU will always operate with
full clock speeds in order to efficiently drive multiple displays—even when no 3D programs are running.

**Note:** NVIDIA notebook GeForce 5xxM series and later GPUs do not have this limitation. For those GPUs the driver can adjust the performance level, depending on demand, even when driving multiple displays.

### 1280 × 1024 @ 60 Hz Not Available on BenQ FP241W Monitors

Even though the monitor EDID lists 1280 × 1024 @ 60 Hz, the screen turns blank when using an HDMI connection. This is an issue with the monitor and not the NVIDIA driver.

Because of this issue with the monitor, the NVIDIA driver blocks the problem mode (1280 × 1024 @ 60 Hz) and makes it unavailable.
3 THE RELEASE 430 STUDIO DRIVER

This chapter covers the following main topics:

- “About the Release 430 Studio Driver” on page 23
- “Hardware and Software Support” on page 23
- “Driver Installation” on page 30

About the Release 430 Studio Driver

This driver release is from the Release 430 family of drivers (versions 430.xx to 434.xx). See “Supported NVIDIA Desktop Products” on page 24 and “Supported NVIDIA Notebook Products” on page 25 for current products supported in this release.

As part of the NVIDIA Notebook Driver Program, this is a reference driver that can be installed on supported NVIDIA notebook GPUs. However, please note that your notebook original equipment manufacturer (OEM) provides certified drivers for your specific notebook on their website. NVIDIA recommends that you check with your notebook OEM about recommended software updates for your notebook. OEMs may not provide technical support for issues that arise from the use of this driver.

Hardware and Software Support

- “Supported Operating Systems” on page 24
- “Support for OpenCL 1.2” on page 24
- “Supported NVIDIA Desktop Products” on page 24
- “Supported NVIDIA Notebook Products” on page 25
- “Supported NVIDIA Quadro & NVS Product” on page 26
- “Supported NVIDIA Quadro Sync II” on page 27
- “Supported NVIDIA Quadro Sync Products” on page 27
- “Supported NVIDIA Quadro SDI Products” on page 28
Supported Operating Systems

This Release 430 Studio driver includes drivers designed for the following Microsoft® operating systems:

- Microsoft Windows® 10, 64-bit

Support for OpenCL 1.2

Kepler, Maxwell, Pascal, and Volta GPUs are supported.

Supported NVIDIA Desktop Products

The following table (from http://www.geforce.com/hardware) lists current NVIDIA desktop products supported by version 430.86 WHQL of the Release 430 driver. For information about desktop products not shown, please see http://www.geforce.com/hardware/desktop-gpus.

Supported NVIDIA Quadro Notebook GPUs

The notebook driver is part of the NVIDIA Verde Notebook Driver Program, and can be installed on supported NVIDIA notebook GPUs. However, please note that your notebook original equipment manufacturer (OEM) provides certified drivers for your specific notebook on their website. NVIDIA recommends that you check with your notebook OEM about recommended software updates for your notebook. OEMs may not provide technical support for issues that arise from the use of this driver.

The following tables list the NVIDIA notebook products supported by the Release 430 driver, version 430.86 WHQL:

<td>Thai</td>
</tr>
<tr>
<td>Finnish</td>
<td>Polish</td>
<td>Turkish</td>
</tr>
<tr>
<td>French</td>
<td>Portuguese (Brazil)</td>
<td></td>
</tr>
</tbody>
</table>

Driver Installation

Minimum Hard Disk Space

The hard disk space requirement is approximately 1.5x the size of the installation download to accommodate extracted and temporary files.

Before You Begin

nTune

If you have previously installed NVIDIA nTune, NVIDIA recommends that you uninstall nTune before installing this driver. After the driver install is complete, you can reinstall NVIDIA nTune.

Notebooks

- Check to make sure that your notebook has a supported GPU (see “Supported NVIDIA Notebook Products” on page 25).
- It is recommended that you back up your current system configuration.
If you own a Dell Inspiron 1420, Dell XPS M1330, Dell XPS M1530, or Dell Latitude D630 or D630c, it is highly recommended that you first install this Dell software update.

Installation Instructions

1. Follow the instructions on the NVIDIA.com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.

2. From the driver download page, click the Download button.

3. If you agree to the “License For Customer Use of NVIDIA Software”, click the Agree & Download button to begin the download.

4. Either click Save to save the file and then run it from your PC, or click Run.

5. Click OK to use the default location, or click the folder icon and specify an alternate location to install the driver files.

6. At the License Agreement page of the Installer, click Agree and Continue.

7. Follow the instructions in the NVIDIA Installer to complete the installation.

Note: The driver presents game screenshots while the driver is installing. If you are not connected to the internet during the installation, you may see a “Navigation to the webpage was cancelled” message instead. The message can be ignored and does not affect the installation. The message won’t appear if the browser cache is cleared.

Note: The NVIDIA PhysX System Software will not be included in the installation if the same version or a later version is already installed.

Note: After the driver installation, Windows 7 may default to 16-bpp color and disable the Desktop Window Manager (DWM). To work around this issue, set the color to 32-bpp and then reboot the PC.

See also the installation/uninstallation considerations explained in “Known Product Limitations” on page 15.
**Notice**

ALL NVIDIA DESIGN SPECIFICATIONS, REFERENCE BOARDS, FILES, DRAWINGS, DIAGNOSTICS, LISTS, AND OTHER DOCUMENTS (TOGETHER AND SEPARATELY, “MATERIALS”) ARE BEING PROVIDED “AS IS.” NVIDIA MAKES NO WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE MATERIALS, AND EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES OF NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE.
