Chapter 1. Introduction to Release Notes

This edition of *Release Notes* describes the Release 440 family of NVIDIA® Quadro®, NVS™, Tesla®, and Quadro Notebook Drivers for Microsoft® Windows® 10. NVIDIA provides these notes to describe performance improvements and bug fixes in each documented version of the driver.

**Structure of the Document**

This document is organized in the following sections:

- “Release 440 Driver Changes” on page 2 gives a summary of changes, and fixed and open issues in this version.
- “The Release 440 Driver” on page 16 describes the NVIDIA products and languages supported by this driver, the system requirements, and how to install the driver.
- “NVIDIA Tesla Compute Cluster Mode” on page 38 describes the Tesla Compute Cluster mode.

**Changes in this Edition**

This edition of the *Release Notes* for Windows 10 includes information about NVIDIA graphics driver version 442.92, and lists changes made to the driver since version 431.94.

These changes are discussed beginning with the chapter “Release 440 Driver Changes” on page 2.
Chapter 2. Release 440 Driver Changes

This chapter describes open issues for version 442.92, and resolved issues and driver enhancements for versions of the Release 440 driver up to version 442.92.

The chapter contains these sections:

► "Version 442.92 Highlights" on page 3
► "Changes in Version 442.92" on page 10
► "Changes in Version 442.74" on page 11
► "Changes in Version 442.50" on page 12
► "Changes in Version 442.19" on page 13
► "Open Issues in Version 442.92" on page 14
► "Issues Not Caused by NVIDIA Drivers" on page 15
Version 442.92 Highlights

This section provides highlights of version 442.92 of the NVIDIA Release 440 Driver for Windows 7 and later.

- Existing Support
- What's New in Version 442.92
- What's New in Release 440
- Discontinued and Unsupported Features
- Limitations in This Release

Existing Support

- This release supports the following APIs:
  - Open Computing Language (OpenCL™ software) 1.2 for NVIDIA® Kepler™ and later GPUs
  - OpenGL® 4.6
  - Vulkan® 1.1
  - DirectX 11
  - DirectX 12
  - NVIDIA® CUDA® 10.2
- This driver installs nView Desktop Manager version 149.77.
What’s New in Version 442.92

RTX-powered Creative App Updates

Added support for RTX-accelerated ray tracing and other features for the following RTX-powered creative applications:

- **Unreal Engine 4.25**
  Includes production-ready support for RTX-accelerated real-time ray tracing. (Currently available as preview with final release in a few weeks.)

- **OctaneRender 2020**
  Adds production-ready OptiX 7 support.

- **D5 Render**
  D5 Render is a brand new visualization app using real-time ray tracing. (Currently available in a free public beta, with the official release expected at the end of May.)

- **Adobe’s suite of 3D material creation apps: Substance Designer and Substance Painter**
  In addition to Substance’s existing support for RTX acceleration for baking, the Curvature baker in Designer and Painter is being upgraded to now use ray tracing.

- **Keyshot 9.2 and Keyshot Viewer**
  Includes the OptiX 7 enabled renderer just released by Luxion.

Other Changes

- See “Changes in Version 442.92” on page 10 and “What’s New in Release 440” on page 5.
What’s New in Release 440

Quadro ODE Driver

Release 440 is an ‘Optimal Drivers for Enterprise’ (ODE) branch release. ODE drivers are designed and tested to provide long-term stability and availability, making these drivers ideal for enterprise customers and other users who require application and hardware certification from ISVs and OEMs respectively.

Quadro ODE drivers are a superset of the NVIDIA Studio Drivers and provide all the benefits of the Studio Driver in addition to Quadro-specific enhancements and testing.

Release 440 delivers performance enhancements over the previous ODE, Release 430, with performance gains up to 30% for popular applications such as Dassault Systemes SOLIDWORKS, PTC Creo, and Autodesk VRED, depending on application mode and optimization settings.

New Features

► Beginning with version 442.19, NVIDIA no longer provides Quadro drivers for Windows 7.

► Application Profiles
  Added or updated the following application profiles.
  • Adobe [beta variants]
  • Siemens Star-CCM+ apps
  • Siemens Star-CCM+ VR apps
  • VRED - added VREDGo.exe to profile
  • Modo - updated ‘Luxology Modo’ app profile name to ‘Foundry Modo’
  • Modo - enabled “Threaded Optimization”
  • Solidworks - added Solidworks RX to profile

► Added support for Windows 10, November 2019 Update [Update 19H2]

► Added security updates for driver components.
  See the NVIDIA Security Bulletin 4996 for details on updates in driver version 442.50.
  See the NVIDIA Security Bulletin 4907 for details on updates in driver version 441.12.
  See also the section “Driver Security” on page 19 for actions to take to mitigate vulnerabilities.

► Added support for NVIDIA Quadro RTX 6000 and NVIDIA Quadro RTX 8000 GPU models compatible with passive cooling.

► Added support for RTX-accelerated features such as interactive rendering for Maya 2020 and Arnold 6.
Chapter 2: RELEASE 440 DRIVER CHANGES

- Added support for RTX-accelerated ray tracing offered by Chaos Group’s V-Ray GPU Next and Blender 2.81.
- Added support for CUDA 10.2.
- G-SYNC is now supported on windowed OpenGL and Vulkan applications.
- Added the ability to merge and scale content of two displays and output the final image to a separate display/projector attached to the same GPU.
- Added NVIDIA RTXTM performance improvements for supported applications.

NVIDIA Control Panel Texture Filtering Controls

- *NVIDIA Control Panel*->3D Settings->Texture Filtering-Quality now visible for Quadro products and defaults to "High Quality".
- *NVIDIA Control Panel*->3D Settings->Texture Filtering-Neg LOD Bias now visible for Quadro products.

OpenGL driver -

Exposed the following extensions

- GL_EXT_multiview_texture_multisample
  Enables MSAA.
- GL_EXT_multiview_timer_query
  Enables Timer Queries.
- GL_EXT_multiview_tessellation_geometry_shader
  Enables Geometry Shaders and Tessellation Shaders.

Added the following extension

- WGL_NV_multigpu_context
  Provides per-context control over SLI mode. For multi-GPU, multi-display configurations, the extension allows explicit control over the content each GPU renders to in each section of the combined display. For example, a VR-capable application can provide performance in VR using VR SLI and also render efficiently to a monitor using SLI AFR.

Added Beta support for GPU Integer Scaling

*New control in the NVIDIA Control Panel*->Display->Adjust desktop size and position page. *Supported on NVIDIA Turing GPUs and later; Windows 10 April 2018 Update and later.*

Integer scaling is a new GPU scaling method which scales smaller-than-native-resolution-size source content by duplicating the pixels at the maximum possible integer factor on the horizontal and vertical directions.
Limitations Under Windows 10

Cross-adapter Clone Mode

Under Windows 10, clone mode across graphics processors is handled by the Windows OS, and not by the NVIDIA driver. Consequently, there are no controls for cross-adapter clone mode in the NVIDIA Control Panel under Windows 10.

Functionality of some display controls in the NVIDIA Control Panel may be affected if cross-adapter clone mode is enabled through the Windows Control Panel. In this case, use the Windows Control Panel to adjust display settings.

Optimus Systems

Because cross-adapter clone mode is handled by the Windows 10 OS, there are no display controls in the NVIDIA Control Panel if no display is connected to the NVIDIA GPU.
Discontinued and Unsupported Features

Discontinued Support in this Release

- **Windows 7**
  Quadro drive 441.66 is the last version to support Windows 7. Beginning with version 442.19, NVIDIA no longer provides Quadro drivers for Windows 7.

- **Quadro SDI Products**
  Beginning with Release 440, the NVIDIA Professional Drivers for Windows no longer supports the following Quadro SDI products:
  - NVIDIA Quadro SDI Output Card (all versions)
  - NVIDIA Quadro SDI Capture Card

- **3D Vision**
  Beginning with Release 430, the NVIDIA Professional Drivers for Windows no longer supports 3D Vision technologies. Please see https://nvidia.custhelp.com/app/answers/detail/a_id/4845 for additional details.

- **NVIDIA Kepler GPUs for Notebooks**
  Beginning with Release 430, the NVIDIA driver no longer supports NVIDIA GPUs for notebooks based on the Kepler architecture.

Limitations in This Release

The following features are not currently supported or have limited support in this driver release:

**External Graphics**

- **External GPU Surprise Removal**
  Not all applications have been designed to address surprise removal of the external GPU; disconnection of the external GPU while applications are running is not advised.

- **Mixed GeForce/Quadro Products**
  Mixed GeForce/Quadro products are supported (Geforce GPU + Quadro eGPU, or Quadro GPU + Geforce eGPU), but requires installation of the GeForce driver package. The Quadro package does not install GeForce drivers.

**Deep Color (10 bpc) on HDR-Capable Monitors Under Windows 10 RS2 and RS3**

Depending on the monitors you have connected, Windows may initially set the color depth to 8-bpc (bits per channel). You can then enable deep color [10bpc] through the NVIDIA Control Panel. If you enable deep color on HDR-capable monitors, the screen may become blank due to the current SDR/HDR [standard dynamic range/high dynamic range] management policies in Windows 10 RS2 and RS3. In this event, the driver will revert back to the 8-bpc color space.
Experimental OpenCL 2.0 Features

Select features in OpenCL 2.0 are available in the driver for evaluation purposes only. The following are the features as well as a description of known issues with these features in the driver:

- **Device side enqueue**
  - The current implementation is limited to 64-bit platforms only.
  - OpenCL 2.0 allows kernels to be enqueued with `global_work_size` larger than the compute capability of the NVIDIA GPU. The current implementation supports only combinations of `global_work_size` and `local_work_size` that are within the compute capability of the NVIDIA GPU.

  The maximum supported CUDA grid and block size of NVIDIA GPUs is available at [http://docs.nvidia.com/cuda/cuda-c-programming-guide/index.html#compute-capabilities](http://docs.nvidia.com/cuda/cuda-c-programming-guide/index.html#compute-capabilities). For a given grid dimension, the `global_work_size` can be determined by CUDA grid size x CUDA block size.

  - For executing kernels (whether from the host or the device), OpenCL 2.0 supports non-uniform ND-ranges where `global_work_size` does not need to be divisible by the `local_work_size`. This capability is not yet supported in the NVIDIA driver, and therefore not supported for device side kernel enqueues.

- **Shared virtual memory**
  - The current implementation of shared virtual memory is limited to 64-bit platforms only.
Changes in Version 442.92

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- [RayTracing]: Performance drop occurs when using `optixGetTriangleVertexData`.
- [OptiX][Arnold] Buffer overrun occurs on decrypted PTX.
- [OptiX][Arnold] Fixes and improvements for Arnold 6.0.3 Sparse Texture build.
- [Optix][Arnold]: Artifacts appear in non-square, non-mipmapped textures.
- [OptiX][Arnold]: Improved OptiX demand load paging to maximize performance.
- [OptiX][Arnold SDK]: Application crashes [access violation] may occur.
- [OptiX]: OptiX generates invalid code for trap instructions.
- [Notebook]: External display audio does not work.
Changes in Version 442.74

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

► [Enscape]: The application crashes in the driver when running out of video memory with Vulkan dedicated allocations and OpenGL interoperability.

► [Enscape]: The application sees device loss and the driver hangs when running out of video memory.

► [Arnold v6.0.1.0/v.6.0.2.0.rc2]: The application crashes or GPU error occurs when rendering with Arnold plugin.

► [DaVinci Resolve]: Playing a Neat Video results in the following message from Resolve - ‘The GPU failed to perform image processing because of an error. Error Code: 4.’

► [Mosaic]: Application corruption occurs when running in Mosaic using overlap and warp and blend in full-screen stereo.

► [Warp and Blend]: Warping feature does not get enabled after rotating the display to Portrait or Flipped Portrait from the NVIDIA Control Panel.

► Width/Height display coordinates are swapped in Portrait mode.
Changes in Version 442.50

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

► [Sony Catalyst]: Applications hang when using OpenCL/OpenGL interoperability.
► [Colorfront]: Illegal address error occurs when accessing pinned memory.
► [3dexperience 2020x]: Vertical sync cannot be disabled in the app.
Changes in Version 442.19

The following sections list the important changes and the most common issues resolved in this driver version.

Fixed Issues

- [Quadro P1000][Notebook][OpenGL quad-buffered stereo]: The screen turns black after enabling quad-buffered stereo.
- [Creo 6]: Models are not textured properly.
- [Creo]: The driver crashes while drawing lines using glDrawArrays (GL_LINE_STRIP).
- [Catia]: The system crashes (error 7 code 3) when using Vulkan-OpenGL interoperability.
- [DaVinci Resolve Studio]: Shared memory of the non-Display GPU is not flushed when switching Resolve projects multiple times.
- [Redshift][CUDA]: CUDA memory leak with cuMemHostAlloc/cuMemFreeHost occurs when there is more than one device/context active in the app.
- [Modo]: The application crashes when monitors are connected to separate GPUs in a dual GPU system.
- [Optix 6 Denoiser][HDR]: Artifacts appear in HDR mode when tiling is in effect.
- [Optix][Demand Load] Artifacts appear in non-square, non-mipmapped textures.
- [RayTracing]: V-Ray intersection artifacts appear when 2D displacement is enabled in a scene.
- [Quadro RTX/P-series][OpenGL]: Image Copy does not work between different GPUs.
- [Maya]: The application locks up during clFlush() call when using OpenCL / OpenGL interoperability.
Open Issues in Version 442.92

As with every released driver, version 442.92 of the Release 440 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others may have workaround solutions.

Windows 10 Issues

- [Alchemist]: The application crashes when either changing the display resolution or switching to another display with a different resolution.

  To workaround, avoid changing the resolution, or disconnecting from or connecting to an external display with the application opened.
Issues Not Caused by NVIDIA Drivers

This section lists issues that are not due to the NVIDIA driver as well as features that are not meant to be supported by the NVIDIA driver for Windows 7.

► “Application Issues” on page 15

Application Issues

► [3ds Max 2017]: DirectX 9, Mode Texture of some models disappears after some time if no operation (such as zoom, pan, or rotate) is performed on the model.

► [Quadro K2200][Bunkspeed Shot 2014]: Render Argument exception occurs in Accurate Mode, and Internal Rendering Error occurs with Fast Mode.

Quadro K2200/K60 are not supported by Bunkspeed software.

► Quadro 6000: OpenCL/OpenGL interoperability performance suffers with clEnqueueReleaseGLObjects.

To avoid this issue, use CUDA.
Chapter 3. The Release 440 Driver

This chapter covers the following main topics:

- “Driver Security” on page 17
- “Advanced Driver Information” on page 19
- “Known Product Limitations” on page 25
- “Hardware and Software Support” on page 30
- “Driver Installation” on page 36
Driver Security

Follow these safe computing practices:

- Only download or execute content and programs from trusted third parties.
- Run your system and programs with the least privilege necessary. Users should run without administrator rights whenever possible.
- When running as administrator, do not elevate UAC privileges for activities or programs that don’t need them.

This section describes additional actions to take to mitigate specific known security issues.

Restricting/Enabling Access to GPU Performance Counters

The NVIDIA graphics driver contains a vulnerability [CVE-2018-6260] that may allow access to application data processed on the GPU through a side channel exposed by the GPU performance counters. GPU performance counters are needed by developers in order to use NVIDIA developer tools such as CUPTI, Nsight Graphics, and Nsight Compute. In order to address CVE-2018-6260 the driver (starting with version 419.67) automatically disables access for non-admin users. For more information about CVE-2018-6260 visit the NVIDIA Security Bulletin 4772.

Enabling Access to GPU Performance Counters Using the NVIDIA Control Panel

Access to GPU performance counters can be enabled for non-admin users who need to use NVIDIA developer tools. Enabling access to GPU performance counters can be accomplished through the NVIDIA Control Panel->Developer->Manage GPU Performance Counters page. Refer to the Developer->Manage GPU Performance Counters section of the NVIDIA Control Panel Help for instructions.

Note: Access to GPU performance counters should be kept disabled for non-admin users who do not need to use NVIDIA developer tools.
Restricting/Enabling Access to GPU Performance Counters Across an Enterprise Using Scripts

Enterprise administrators can use scripts to programmatically apply the settings. The scripts should incorporate the registry key information provided below to automate the deployment.

**CAUTION:** These instructions should be performed only by enterprise administrators. Changes to the registry must be made with care. System instability can result if performed incorrectly.

```
[HKLM\SYSTEM\CurrentControlSet\Services\nvlddmkm\Global\NVTweak]
Value: "RmProfilingAdminOnly"
Type: DWORD
Data: 00000001
```

The data value 1 restricts access to admin users, whereas data value 0 allows access to all users.

A system reboot is required for the changes to take effect.
Advanced Driver Information

This section clarifies instructions for successfully accomplishing the following tasks:

- Turning Off V-Sync to Boost Performance
- NVIDIA Application Configuration Engine (ACE)
- Using the WDDM Driver Model with Tesla GPU GOMs
- SLI Multi-OS – GPU Assignment in System Virtualization

Turning Off V-Sync to Boost Performance

To get the best benchmark and application performance measurements, turn V-Sync off as follows:

1. Open the NVIDIA Control Panel and make sure that Advanced Settings is selected from the control panel tool bar.
2. From the Select a Task pane, under 3D Settings, click Manage 3D Settings, then click the Global Settings tab.
3. From the Global presets pull-down menu, select Base profile.
4. From the Settings list box, select Vertical sync and change its value to Force off, then click Apply.
5. From the Global presets pull-down menu, select 3D App - Default Global Settings (the driver’s default profile) or use the application profile that matches the application you are testing, then click Apply.

Be sure to close the NVIDIA Control Panel completely —leaving it open will affect benchmark and application performance.

NVIDIA Application Configuration Engine (ACE)

This driver includes the NVIDIA Application Configuration Engine (ACE), which automatically detects the workstation application and configures the appropriate profile settings in the NVIDIA Control Panel.

See the *NVIDIA Quadro Professional Drivers: NVIDIA Control Panel Quick Start Guide* for more information about this feature.
Using the WDDM Driver Model with Tesla GPU GOMs

Tesla GPU Operation Modes

Tesla K20X and K20 GPU Accelerators offer the ability to specify the GPU operation mode using NV-SMI/NVML. (refer to: https://developer.nvidia.com/nvidia-management-library-nvml).

By setting the GPU operation mode, developers can selectively turn off certain features in the GPU to get the best performance per watt for certain workloads.

The following are the supported GOMs:

- **Compute-Only**: For running compute tasks only.
  
  By default the Tesla K20X and K20 accelerator boards ship in this mode.

- **Low-Double Precision**: For graphics applications that don’t require high bandwidth double precision.
  
  This is recommended for workloads that are not sensitive to double precision but at the same time need graphics capabilities.

- **All On**: This is recommended only when the workload needs full double precision as well as graphics capabilities.

WDDM and TCC Driver Models

Along with the GPU operation mode, the developer needs to select the compatible driver model for the Tesla K20X and K20.

- **Tesla Compute Cluster (TCC)**: Optimized for running compute workloads.

- **Windows Device Driver Model (WDDM)**: Designed for graphics application and not recommended for compute workloads.
Compatibility Between GOM and Driver Models

Table 1 shows which GPU operation modes are compatible with which driver models.

**Table 1  GOM and Driver Model Compatibility**

<table>
<thead>
<tr>
<th>GOM</th>
<th>TCC Driver Model</th>
<th>WDDM Driver Model</th>
<th>Use Case Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>All On</td>
<td>YES</td>
<td>YES</td>
<td>All use cases are supported.</td>
</tr>
<tr>
<td>Compute-Only</td>
<td>YES</td>
<td>NO</td>
<td>The following are unsupported:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>X11 and those that require X11</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(GLInterop, OCL conformance and VIPER)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>32-bit Windows OS</td>
</tr>
<tr>
<td>Low Double Precision</td>
<td>YES</td>
<td>YES</td>
<td>All use cases supported.</td>
</tr>
</tbody>
</table>

The compute-only GOM is supported only on the TCC driver model, while the WDDM driver model supports only GOM modes that enable graphics.

The compute-only GOM and WDDM are incompatible and should not be used simultaneously.

*The Tesla K20 Active Accelerators for workstations ship in “compute-only” mode and cannot be modified. Therefore, use only the TCC driver model with these products.*

Using the WDDM Driver Model

To use the WDDM driver model with Tesla K20x and K20 GPU Accelerators for servers, first switch the GOM mode from compute-only to All On, then switch from TCC to WDDM.

*Do not attempt to specify the driver model by editing the registry.* Doing so can result in compute-only GOM and WDDM being configured simultaneously, which might require a clean installation of the driver to fix.

*Always use NVIDIA-provided tools to specify a processing mode or to switch between driver models.* Such tools include nvidia-smi or the NVIDIA Control Panel->Manage Maximus Settings page. These tools provide warnings in the case of a conflict.
SLI Multi-OS – GPU Assignment in System Virtualization

On systems with two or more graphics cards installed, this driver supports a hypervisor’s ability to directly assign GPUs to guest virtual machines (VMs). This direct assignment allows each guest VM to run on their own operating system with their own GPU and driver. The assignment allows full GPU performance and functionality in the guest VM.

Hardware Platform Requirements

To make use of GPU passthrough with virtual machines running Windows and Linux, the hardware platform must support the following features:

- A CPU with hardware-assisted instruction set virtualization: Intel VT-x or AMD-V.
- Platform support for I/O DMA remapping.
  
  On Intel platforms the DMA remapper technology is called Intel VT-d.
  
  On AMD platforms it is called AMD IOMMU.

Support for these feature varies by processor family, product, and system, and should be verified at the manufacturer’s website.

Supported Hypervisors

The following hypervisors are supported:

<table>
<thead>
<tr>
<th>Hypervisor</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Citrix XenServer</td>
<td>Version 6.0 and later.</td>
</tr>
<tr>
<td>VMware vSphere (ESX / ESXi)</td>
<td>Version 5.1 and later.</td>
</tr>
<tr>
<td>Parallels Workstation Extreme</td>
<td>Version 4 and later</td>
</tr>
</tbody>
</table>

Supported Graphics Cards

The following GPUs are supported for device passthrough:

<table>
<thead>
<tr>
<th>GPU Family</th>
<th>Boards supported</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turing</td>
<td>Quadro: RTX 8000, RTX 6000, RTX 5000, RTX 4000</td>
</tr>
<tr>
<td>Volta</td>
<td>Quadro: GV100</td>
</tr>
<tr>
<td></td>
<td>Tesla: V100</td>
</tr>
</tbody>
</table>
## Notes and Known Issues

### VMware

- **PCI I/O hole may need to be changed for Windows 64-bit VMs.**
  
  Windows 64-bit VMs may require that you edit the VM configuration file to configure a larger PCI I/O hole for the GPU.

- **Access Control Services is required on some switches.**
  
  Starting with ESX 5.0 Update 1, Access Control Services (ACS) is required on any switches in the PCIe hierarchy above a PCIe device that is to be used for passthrough. If ACS is not present, ESX will not allow the device to be assigned directly to a VM.

  To allow assignment of devices below switches that do not support ACS, you can disable the ACS check as follows:

  ```bash
  esxcfg-advcfg -k true disableACSCheck
  ```

- **Configuring passthrough to a Windows Server 2008R2 VM.**

  The VMware WDDM driver must be manually installed on Windows Server 2008 R2.

  Follow the steps provided at [http://communities.vmware.com/message/1423263#1425288](http://communities.vmware.com/message/1423263#1425288).

- **MSI translation must be disabled for ESXi 5.1 and 5.5.**

  Blue-screen crashes may occur on VMs with assigned GPUs if MSI is initially enabled for passthrough devices.

  To avoid this issue, disable MSI translation by setting `pciPassthru0.msiEnabled = "FALSE"` in the VM’s VMX file.

  Disabling MSI translation is not needed for ESXi 6.0 and later.

### Citrix Xenserver

- **XenServer 6.1 workaround for 64-bit MMIO failures on PCI passthrough.**

  Dom0 kernel may relocate GPU BARs to an invalid location immediately beyond the end of physical RAM. There are two workaround options to address this condition:
Workaround option #1: Add `pci=use_crs` to the kernel parameters by running the following command in Dom0:

```
/opt/xensource/libexec/xen-cmdline --set-dom0 pci=use_crs
```

Workaround option #2: Install the hotfix provided by Citrix at [http://support.citrix.com/article/CTX137645](http://support.citrix.com/article/CTX137645):
Known Product Limitations

This section describes problems that will not be fixed. Usually, the source of the problem is beyond the control of NVIDIA. Following is the list of problems and where they are discussed in this document:

- “Issues Installing the NVIDIA Control Panel from the Windows Store” on page 26
- “Some APIs do not Report Total Available Graphics Memory Correctly” on page 26
- “Using HDMI/DisplayPort Audio with Displays that have a High Native Resolution” on page 28
- “Using HDMI/DisplayPort Audio in Dualview or Clone Mode Configurations” on page 28
- “GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes” on page 28
- “SLI Connector Requirement on NVIDIA Quadro SLI Cards” on page 29
- “Applying Workstation Application Profiles” on page 29
Issues Installing the NVIDIA Control Panel from the Windows Store

You may encounter issues when attempting to install the NVIDIA Control Panel from the Windows Store under Windows 10, such as

- The download process from the Windows Store freezes at the “Starting download ...” stage.
- The NVIDIA Control Panel fails to download after initiating the download from the notification popup that appears upon installing the driver.

For assistance with installing the NVIDIA Control Panel from the Microsoft Windows Store, see the NVIDIA Knowledge Base Article, NVIDIA Control Panel Windows Store App.

For information about the DCH vs Standard drivers for Windows 10, see the NVIDIA Knowledge Base Article, NVIDIA DCH/Standard Display Drivers for Windows 10 FAQ.

Some APIs do not Report Total Available Graphics Memory Correctly

Background–TAG Memory

In the Windows Display Driver Model (WDDM), Total Available Graphics (TAG) memory is reported as the sum of

- Dedicated Video Memory (video memory dedicated for graphics use)
- Dedicated System Memory (system memory dedicated for graphics use), and
- Shared System Memory (system memory shared between the graphics subsystem and the CPU).

The values for each of these components are computed according to WDDM guidelines when the NVIDIA Display Driver is loaded.

Issue

NVIDIA has found that some TAG-reporting APIs represent video memory using 32-bits instead of 64-bits, and consequently do not properly report available graphics memory when the TAG would otherwise exceed 4 gigabytes (GB). This results in under reporting of available memory and potentially undesirable behavior of applications that rely on these APIs to report available memory.

The reported memory can be severely reduced. For example, 6 GB might be reported as 454 MB, and 8 GB might be reported as 1259 MB.
NVIDIA Action for Some GeForce-based Systems

For GeForce GPUs with 2.75 GB or less of video memory, the NVIDIA display driver constrains TAG memory to just below 4 GB\(^1\). In this scenario, the Shared System Memory component of TAG is limited first, before limiting Dedicated Video Memory.

This is a policy decision within the driver, and results in reliable reporting of sub-4 GB TAG memory.

When TAG Reporting Would Not Be Limited

For GeForce-based GPUs with more than 2.75 GB of video memory, as well as all Quadro and Tesla GPUs, the NVIDIA display driver does not constrain TAG memory reporting.

The disadvantage of constraining TAG on systems with larger amounts of video and system memory is that memory which otherwise would be available for graphics use is no longer available. Since shared system memory is limited first, driver components and algorithms utilizing shared system memory may suffer performance degradation when TAG is constrained.

Since these and similar scenarios are prevalent in many Workstation applications, the NVIDIA driver avoids constraining TAG on all Quadro and Tesla-based systems. Likewise, the driver does not constrain TAG for GeForce-based systems with more than 2.75 GB of video memory.

---

\(^1\) The WDDM guidelines dictate minimum and maximum values for the components, but the display driver may further constrain the values that are reported (within the allowed minimum and maximum).
Using HDMI/DisplayPort Audio with Displays that have a High Native Resolution

To use HDMI/DisplayPort audio with some displays that have a native resolution higher than 1920x1080, you must set the display to a lower HD resolution.

Some HDMI TV’s have a native resolution that exceeds the maximum supported HD mode. For example, TVs with a native resolution of 1920x1200 exceed the maximum supported HD mode of 1920x1080.

Applying this native mode results in display overscan which cannot be resized using the NVIDIA Control Panel since the mode is not an HD mode.

To avoid this situation and provide a better user experience, the driver treats certain TVs—such as the Viewsonic VX2835wm and the Westinghouse LVM-37w3—as a DVI monitor when applying the native mode. Because the driver does not treat the TV as an HDMI in this case, the HDMI audio is not used.

Using HDMI/DisplayPort Audio in Dualview or Clone Mode Configurations

Two Audio-enabled Ports

In a multi-display configuration where both HDMI/DisplayPort audio ports are enabled, only the primary display will provide the audio.

One Audio-enabled Port

In a multi-display configuration where only one audio port is enabled, such as when one display is a DVI display, then the HDMI/DisplayPort display can provide the audio whether is it the primary or secondary display.

GPU Runs at a High Performance Level (full clock speeds) in Multi-display Modes

This is a hardware limitation and not a software bug. Even when no 3D programs are running, the driver will operate the GPU at a high performance level in order to efficiently drive multiple displays. In the case of SLI or multi-GPU PCs, the second GPU will always operate with full clock speeds; again, in order to efficiently drive multiple displays. Today, all hardware from all GPU vendors have this limitation.
SLI Connector Requirement on NVIDIA Quadro SLI Cards

The SLI connector that links two SLI cards is needed for proper SLI operation. However, the connector can be removed if you do not intend to enable SLI mode. If you remove the connector, then you must make sure that SLI mode is disabled from the NVIDIA control panel. Enabling SLI mode without the SLI connector installed will result in video corruption.

Applying Workstation Application Profiles

► Background

The workstation application profiles are software settings used by the NVIDIA Display Drivers to provide optimum performance when using a selected application. The profile also works around known application issues and bugs.

If there is an available setting for an application, it should be used, otherwise incorrect behavior or reduced performance is likely to occur.

► Issues

Configuration changes require that you restart the application.

Once an application is running, it does not receive notification of configuration changes. Therefore, if you change the configuration while the application is running, you must exit and restart the application for the configuration changes to take effect.
Hardware and Software Support

This chapter covers the following main topics:

- “Supported Operating Systems” on page 30
- “Supported NVIDIA Workstation GPUs” on page 30
- “Supported NVIDIA Notebook GPUs” on page 34
- “Supported Languages” on page 35

Supported Operating Systems

The Release 440 driver, version 442.92, has been tested with

- Microsoft Windows® 10, 64-bit

Supported NVIDIA Workstation GPUs

The following tables list the NVIDIA products supported by the Release 440 driver, version 442.92.

- Table 5.1, “Supported NVIDIA Quadro & NVS Products” on page 31
- Table 5.2, “Supported NVIDIA Quadro Sync II Products” on page 32
- Table 5.3, “Supported NVIDIA Quadro Sync Products” on page 32
- Table 5.4, “Supported NVIDIA Quadro Blade/Embedded Graphics Board Series” on page 33
- Table 5.5, “Supported NVIDIA Tesla Products” on page 33

NVIDIA Tesla Products

The Tesla driver package is designed for systems that have one or more Tesla products installed.

**Only one GHIC can be connected to the server in a Tesla system.**

**This release of the Tesla driver supports CUDA C/C++ applications and libraries that rely on the CUDA C Runtime and/or CUDA Driver API.**

Supported NVIDIA Notebook GPUs

The notebook driver is part of the NVIDIA Verde Notebook Driver Program, and can be installed on supported NVIDIA notebook GPUs. However, please note that your notebook original equipment manufacturer (OEM) provides certified drivers for your specific notebook on their website. NVIDIA recommends that you check with your notebook OEM about recommended software updates for your notebook. OEMs may not provide technical support for issues that arise from the use of this driver.

The following tables list the NVIDIA notebook products supported by the Release 440 driver, version 442.92:

Supported Languages

The Release 440 Graphics Drivers supports the following languages in the main driver Control Panel:

- English [USA]
- English [UK]
- Arabic
- Chinese (Simplified)
- Chinese (Traditional)
- Czech
- Danish
- Dutch
- Finnish
- French
- German
- Greek
- Hebrew
- Hungarian
- Italian
- Japanese
- Korean
- Norwegian
- Polish
- Portuguese [Brazil]
- Portuguese [Euro/Iberian]
- Russian
- Slovak
- Slovenian
- Spanish
- Spanish [Latin America]
- Swedish
- Thai
- Turkish
Driver Installation

Minimum Hard Disk Space

The hard disk space requirement is approximately 1.5x the size of the installation download to accommodate extracted and temporary files.

Before You Begin

nTune

If you have previously installed NVIDIA nTune, NVIDIA recommends that you uninstall nTune before installing this driver. After the driver install is complete, you can reinstall NVIDIA nTune.

Notebooks

- Check to make sure that your notebook has a supported GPU (see “Supported NVIDIA Notebook GPUs” on page 34).
- It is recommended that you back up your current system configuration.
- If you own a Dell Inspiron 1420, Dell XPS M1330, or Dell XPS M1530, or Dell LatitudeD630 or D630c, it is highly recommended that you first install this Dell software update.

SLI Mosaic Mode

You must make sure SLI Mosaic mode is disabled before installing a new driver over a previously installed driver. If SLI Mosaic mode is active on your displays when you install the new driver, the driver will not install properly.

Installation Instructions

1. Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.
2. Click the driver download link.
   The license agreement dialog box appears.
3. Click Accept if you accept the terms of the agreement, then either open the file or save the file to your PC and open it later.
4. Open the NVIDIA driver installation .EXE file to launch the NVIDIA InstallShield Wizard.
5. Follow the instructions in the NVIDIA InstallShield Wizard to complete the installation.

Note: If you are overinstalling the driver (installing over a previous driver without first removing the previous driver), then you must reboot your computer in order to complete the installation.
APPENDIX A NVIDIA Tesla Compute Cluster Mode

This chapter describes the Tesla Compute Cluster (TCC) mode.

- "About Tesla Compute Cluster Mode" on page 38
- "Operating on Systems with non-TCC NVIDIA GPUs" on page 40
- "Setting TCC Mode" on page 40

About Tesla Compute Cluster Mode

TCC Overview

Tesla Compute Cluster (TCC) mode is designed for compute cluster nodes that have one or more Tesla or supported Quadro products installed.

Benefits

- TCC drivers make it possible to use NVIDIA GPUs in nodes with non-NVIDIA integrated graphics.
- NVIDIA GPUs on systems running the TCC drivers will be available via Remote Desktop, both directly and via cluster management systems that rely on Remote Desktop.
- NVIDIA GPUs will be available to applications running as a Windows service (i.e. in Session 0) on systems running the Tesla driver in TCC mode.
TCC Does not Support Graphics Acceleration

- TCC mode does not provide CUDA–DirectX/OpenGL interoperability.

  It is a “non-display” driver, and NVIDIA GPUs using this driver will not support DirectX or OpenGL hardware acceleration.

Running CUDA Applications

- This release of the Tesla/Quadro driver supports CUDA C/C++ applications and libraries that rely on the CUDA C Runtime and/or CUDA Driver API.

- NVIDIA GPUs running the Tesla/Quadro driver in TCC mode will be available for CUDA applications running via services or Remote Desktop.

- In this release, all GPUs will be in compute exclusive mode. As a result, only one CUDA context may exist on a particular device at a time.

- SDK applications that use graphics will not run properly under TCC mode. The following are examples of CUDA SDK applications that are not supported:

<table>
<thead>
<tr>
<th>bicubicTexture</th>
<th>boxFilter</th>
<th>cudaDecodeD3D9</th>
<th>smokeParticles</th>
</tr>
</thead>
<tbody>
<tr>
<td>cudaDecodeGL</td>
<td>fluidsD3D9</td>

<td>simpleD3D11Texture</td>
<td>simpleD3D9</td>
<td></td>
</tr>
<tr>
<td>simpleD3D9Texture</td>
<td>simpleGL</td>
<td>simpleTexture3D</td>
<td></td>
</tr>
</tbody>
</table>
Operating on Systems with non-TCC NVIDIA GPUs

- NVIDIA GPUs running under TCC mode may coexist with other display devices.
- The Tesla/Quadro driver is overinstalled over any NVIDIA display driver in the system—the NVIDIA Tesla driver then becomes the only driver for all NVIDIA GPUs in the system. If the Tesla/Quadro driver is uninstalled at a later time, the previous driver is not restored.
- NVIDIA GPUs that do not support TCC mode will appear as “VGA adapters” in the Windows Device Manager and can be used to drive displays.
  - Non-supported NVIDIA GPUs can still function as CUDA devices, but the GPU’s graphics functionality is not available to applications.

Setting TCC Mode

To change the TCC mode, use the NVIDIA `smi` utility as follows:

```
nvidia-smi -g (GPU ID) -dm (0 for WDDM, 1 for TCC)
```

The following table shows the default TCC/non-TCC mode for supported products.

<table>
<thead>
<tr>
<th>Product</th>
